**RE: NE Canon Drainage Area (Sub-Basin from NE)  
Letter of Map Revision – Orchard Avenue Detention Basin**

To Whom It May Concern:

Please find enclosed two (2) copies of the supporting documentation for the Request for Letter of Map Revision (LOMR) for the area between High Street and Central Avenue within the sub-basin from the NE. Also enclosed is a diskette with HEC-RAS input and output for the project area.

The LOMR submittal is divided into the following sections:

SECTION 1 – Application/Certification Forms  
SECTION 2 – TR20 Run - Hydrologic Analysis  
SECTION 3 – HEC-RAS Run – Pre Detention Conditions  
SECTION 4 – HEC-RAS Run – As Built Conditions  
SECTION 5 – As Built Profiles  
Back Pocket – Revised Floodplain Maps  
Attached plan set

The original FEMA floodplain delineation within this reach was approximate. Therefore, an evaluation of the existing FEMA floodplain was performed utilizing current topographic mapping. Since a regional detention facility was recently constructed by the City of Canon City and will be maintained by them, the FEMA floodplain delineation was modified to reflect the revised downstream flows.

The examination of current topography, combined with revised HEC-RAS runs for the 100-year storm, indicated that the 100-year floodplain is contained within the detention facility, and the defined natural channel.

Please contact me immediately if you have any questions, or need additional information.

Sincerely,

Michael A. Bartusek, P.E.  
Principal

Enclosures

## **SECTION 1**

### **Application/Certification Forms**

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 2.13 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

## 1. OVERVIEW

1. The basis for this revision request is (are): (check all that apply)

Physical change  
 Existing  
 Proposed  
 Improved methodology  
 Improved data  
 Floodway revision  
 Other \_\_\_\_\_

Explain \_\_\_\_\_

2. Flooding Source: NE CANON DRAINAGE AREA (SUB-BASIN FROM NE)

3. Project Name/Identifier: ORCHARD AVENUE LETTER OF MAP REVISION

4. FEMA zone designations affected: A, X

(example: A, AH, AO, A1-A30, A99, AE, V, V1-30, VE, B, C, D, X)

5. The NFIP map panel(s) affected for all impacted communities is (are):

Community No.	Community Name	County	State	Map No.	Panel No.	Effective Date
EX: 480301	Katy, City	Harris, Fort Bend	TX	480301	0005D	02/08/83
480287	Harris County	Harris	TX	48201C	0220G	09/28/90
<u>080067</u>	<u>CANON CITY</u>	<u>FREMONT</u>	<u>CO</u>	<u>080067</u>	<u>0335B</u>	<u>09/29/09</u>

6. The area of revision encompasses the following types of flooding, structures, and associated disciplines: (check all that apply)

Types of Flooding

Riverine  
 Coastal  
 Alluvial Fan  
 Shallow Flooding (e.g. Zones AO and AH)  
 Lakes

Affected by  
wind/wave action

Yes  
 No

Other(describe) \_\_\_\_\_

Structures

Channelization  
 Levee/Floodwall  
 Bridge/Culvert  
 Dam  
 Coastal  
 Fill  
 Pump Station  
 None  
 Channel Relocation  
 Excavation  
 Other(describe)

Disciplines\*

Water Resources  
 Hydrology  
 Hydraulics  
 Sediment Transport  
 Interior Drainage  
 Structural  
 Geotechnical  
 Land Surveying  
 Other (describe)

\* Attach completed "Certification by Registered Professional Engineer and/or Land Surveyor" Form for each discipline checked. (Form 2)

## 2. FLOODWAY INFORMATION

7. Does the affected flooding source have a floodway designated on the effective FIRM or FBFM?  Yes  No  
 8. Does the revised floodway delineation differ from that shown on the effective FIRM or FBFM?  Yes  No

If yes, give reason: PREVIOUS FLOODWAY DELINEATION WAS APPROXIMATE

Attach copy of either a public notice distributed by the community stating the community's intent to revise the floodway or a statement by the community that it has notified all affected property owners and affected adjacent jurisdictions.

9. Does the State have jurisdiction over the floodway or its adoption by communities participating in the NFIP?

Yes  No

If yes, attach a copy of a letter notifying the appropriate State agency of the floodway revision and documentation of the approval of the revised floodway by the appropriate State agency.

### 3. PROPOSED ENCROACHMENTS

10. With floodways:

- 1A. Does the revision request involve fill, new construction, substantial improvement, or other development in the floodway?  Yes  No
- 1B. If yes, does the development cause the 100-year water surface elevation to increase at any location by more than 0.000 feet?  Yes  No

11. Without floodways:

- 2A. Does the revision request involve fill, new construction, substantial improvement, or other development in the 100-year floodplain?  Yes  No
- 2B. If yes, does the cumulative effect of all development that has occurred since the effective SFHA was originally identified cause the 100-year water surface elevation to increase at any location by more than one foot (or other surcharge limit if community or state has adopted more stringent criteria)?  Yes  No

If the answer to either Items 1B or 2B is yes, please provide documentation that all requirements of Section 65.12 of the NFIP regulations have been met, regarding evaluation of alternatives, notice to individual legal property owners, concurrence of CEO, and certification that no insurable structures are impacted.

### 4. REVISION REQUESTOR ACKNOWLEDGMENT

12. Having read NFIP Regulations, 44 CFR Ch. I, parts 59, 60, 61, and 72, I believe that the proposed revision  is  is not in compliance with the requirements of the aforementioned NFIP Regulations.

### 5. COMMUNITY OFFICIAL ACKNOWLEDGMENT

13. Was this revision request reviewed by the community for compliance with the community's adopted floodplain management ordinances?  Yes  No

14. Does this revision request have the endorsement of the community?  Yes  No

If no to either of the above questions, please explain: \_\_\_\_\_

Please note that community acknowledgment and /or notification is required for all requests as outlined in Section 65.4 (b) of the NFIP Regulations.

### 6. OPERATION AND MAINTENANCE

15. Does the physical change involve a flood control structure (e.g., levees, floodwalls, channelization, basins, dams)?  Yes  No

If yes, please provide the following information for each of the new flood control structures:

A. Inspection of the flood control project will be conducted periodically by CITY OF CARLON CITY entity

with a maximum interval of 3 months between inspections.

B. Based on the results of scheduled periodic inspections, appropriate maintenance of the flood control facilities will be conducted by CITY OF CARLON CITY (entity)

to ensure the integrity and degree of flood protection of the structure.

C. A formal plan of operation, including documentation of the flood warning system, specific actions and assignments of responsibility by individual name or title, and provisions for testing the plan at intervals not less than one year,  has  has not been prepared for the flood control structure.

D. The community is willing to assume responsibility for  performing  overseeing compliance with the maintenance and operation plans of the ORCHARD AVENUE DENTON FACILITY  
(Name)

flood control structure. If not performed promptly by an owner other than the community, the community will provide the necessary services without cost to the Federal government.

Attach operation and maintenance plans

7. REQUESTED RESPONSE FROM FEMA

16. After examining the pertinent NFIP regulations and reviewing the document entitled "Appeals, Revisions, and Amendments to Flood Insurance Maps: A guide for Community Officials," dated January 1990, this request is for a:

a. CLOMR A letter from FEMA commenting on whether a proposed project, if built as proposed, would justify a map revision (LOMR or PMR), or proposed hydrology changes (see 44 CFR Ch. I, Parts 60, 65, and 72).

b. LOMR A letter from FEMA officially revising the current NFIP map to show changes to floodplains, floodways, or flood elevations. LOMRs typically depict decreased flood hazards. (See 44 CFR Ch. I Parts 60 and 65.)

c. PMR A reprinted NFIP map incorporating changes to floodplains, floodways, or flood elevations. Because of the time and cost involved to change, reprint, and redistribute an NFIP map, a PMR is usually processed when a revision reflects increased flood hazards or large-scope changes. (See 44 CFR Ch. I, Parts 60 and 65.)

d. Other: Describe \_\_\_\_\_

8. FORMS INCLUDED

17. Form 2 entitled, "Certification By Registered Professional Engineer and/or Land Surveyor" must be submitted.

The following forms should be included with this request if (check the included forms):

- Hydrologic analysis for flooding source differs from that used to develop FIRM
- Hydraulic analysis for riverine flooding differs from that used to develop FIRM
- The request is based on updated topographic information or a revised floodplain or floodway delineation is requested
- The request involves any type of channel modification
- The request involves new bridge or culvert or revised analysis of an existing bridge or culvert
- The request involves a new revised levee/floodwall system
- The request involves analysis of coastal flooding
- The request involves coastal structures credited as providing protection from the 100-year flood
- The request involves an existing, proposed, or modified dam
- The request involves structures credited as providing protection from the 100-year flood on an alluvial fan

Hydrologic Analysis Form (Form 3)

Riverine Hydraulic Analysis Form (Form 4)

Riverine /Coastal Mapping Form (Form 5)

Channelization Form (Form 6)

Bridge/Culvert Form (Form 7)

Levee/Floodwall System Analysis Form (Form 8)

Coastal Analysis Form (Form 9)

Coastal Structures (Form 10)

Dam Form (Form 11)

Alluvial Fan Flooding Form (Form 12)

18. The minimum initial review fee for the appropriate request category has been included.  Yes  No

Initial fee amount: \$ 4300

Check or money order only. Make check or money order payable to : National Flood Insurance Program. If paying by Visa or Mastercard please refer to the credit card information form which follows this form.

or

19. This request is for a project that is for public benefit and is primarily intended for flood loss reduction to insurable structures in identified flood hazard areas which were in existence prior to the commencement of construction of the flood control project.  Yes  No

or

20. This request is to correct map errors, to include the effects of natural changes within the areas of special flood hazard, or solely to provide more detailed data.  Yes  No

Note: I understand that my signature indicates that all information submitted in support of this request is correct.

Signature of Revision Requester

MICHAEL A BARTUSEK - PROJECT MANAGER

CITY OF CANON CITY

Community Name

Date

Does this request impact any other communities?  Yes  No

If yes, attach letters from all affected jurisdictions acknowledging revision request and approving changes to floodway, if applicable.

Note: Although a photograph of physical changes is not required, it may be helpful for FEMA's review.

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average .23 hour per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

1. This certification is in accordance with 44 CFR Ch. I, Section 65.2

2. I am licensed with an expertise in HYDRAULICS  
[example: water resources (hydrology, hydraulics, sediment transport, interior drainage)\* structural, geotechnical, land surveying.]

3. I have 24 years experience in the expertise listed above.

4. I have  prepared  reviewed the attached supporting data and analyses related to my expertise.

5. I  have  have not visited and physically viewed the project.

6. In my opinion, the following analyses and/or designs, is/are being certified:

REVISED HYDRAULIC ANALYSIS OF NE CANON DRAINAGE AREA SUB-BASIN FROM NE

7. Base upon the following review, the modifications in place have been constructed in general accordance with plans and specifications.

Basis for above statement: (check all that apply)

- a.  Viewed all phases of actual construction.
- b.  Compared plans and specifications with as-built survey information.
- c.  Examined plans and specifications and compared with completed projects.
- d.  Other \_\_\_\_\_

8. All information submitted in support of this request is correct to the best of my knowledge. I understand that any false statement may be punishable by fine or imprisonment under Title 18 of the United States Code, Section 1001.

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 3.67 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

Community Name: CANON CITY, COLORADO

Flooding Source: NE CANON DRAINAGE AREA (SUB-BASIN From NE)  
(One form for each flooding source)

Project Name/Identifier: ORCHARD AVENUE LETTER OF MAP REVIEW

## 1. HYDROLOGIC ANALYSIS IN FIS

Approximate study stream (Zone A)  
 Detailed study stream (briefly explain methodology) \_\_\_\_\_

## 2. REASON FOR NEW HYDROLOGIC ANALYSIS

No existing analysis  
 Improved data (see data revision on page 3)  
 Changed physical conditions of watershed (explain) REGIONAL DETENTION FACILITY HAS REDUCED DOWN STREAM FLOWS

Alternative methodology (justify why the revised model is better than model used in the effective FIS)  
PREVIOUS FLOODWAY DELINEATION WAS APPROXIMATE

Evaluation of proposed conditions (CLOMRs only) (explain) \_\_\_\_\_

Other \_\_\_\_\_

If a computer program/model was used in revising the hydrologic analysis, please provide a diskette with the input files for the 10-, 50-, 100 - and 500-year recurrence intervals.

Only the 100-year recurrence interval need be included for SFHAs designated as Zone A.

## 3. APPROVAL OF ANALYSIS

Approval of hydrologic analysis, including the resulting peak discharge value (s) has been provided by the appropriate local, state, or Federal Agency. (i.e., \_\_\_\_\_)  
Attach evidence of approval.

Approval of the hydrologic analysis is not required by any local, State, or Federal Agency.

Stream: NE CANON DRAINAGE AREA (SUB-BASIN FROM NE)

### Comparison of 100-year Discharges

Note: When revised discharges are not significantly different than FIS discharges, FEMA may require a confidence limits analysis on attachment D at a later date to complete the review.

As is often the case with revision requests, only a portion of a stream may actually be revised or be affected by a revision. Therefore, transition to the unrevised portion is important to maintain the continuity of the study. NFIP regulations stipulate that such a transition must be assured. What is the transition from the proposed discharges to the effective discharges? Please explain how the transition was made (*attach separate sheet if necessary*)

100 YR. FLOW OF 926 cfs IS REDUCED TO 160 cfs BY MEANS OF A 37 AC·FT DETENTION FACILITY

ATTACH A COMPLETED REVIEW OF RESULTS PAGE FOR EACH FLOODING SOURCE.

Is the new hydrologic analysis being developed solely to revise the flow values presented in the FIS (*i.e. no changed hydraulic conditions*)?  Yes  No

If yes, does the 100-year water surface elevation change by 1.0 foot or more?  Yes  No

FEMA does not normally revise NFIP maps solely due to insignificant flow changes where changes in 100-year water surface elevation are less than 1.0 foot.

## 5. HISTORICAL FLOODING INFORMATION

Is historical data available for the flooding source?  Yes  No

If yes, provide the following:

Location along flooding source: \_\_\_\_\_

Maximum peak discharge: \_\_\_\_\_ cfs

Second highest peak discharge: \_\_\_\_\_ cfs

Source of information: \_\_\_\_\_

## 6. GAGE RECORD INFORMATION

Location of nearest gage to project site (along flooding source or similar watershed; specify)

None

Gaging Station: \_\_\_\_\_

Drainage area at gage: \_\_\_\_\_ mi<sup>2</sup>

Number of years of data: \_\_\_\_\_

## 7. DATA REVISION

Please use the following table to list all the data and/or parameters affected by this request and identify them as new data (*New*) or as revising existing data (*Revised*). (If necessary, attach a separate sheet.)

Data Parameter	New	Revised	Data Source
<u>50-YEAR DISCHARGE</u>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>TR 20 RUNOFF MODEL</u>
<u>10-YEAR DISCHARGE</u>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<u>TR 20 RUNOFF MODEL</u>
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____
_____	<input type="checkbox"/>	<input type="checkbox"/>	_____

- Data source can be from a Federal, State, or local government agency, or from a private source. Some State and local governments may have less strict data requirements than Federal agencies, in which case the hydrologic data may not be accepted by FEMA unless it is demonstrated that the data give a better estimate of the flood discharge.
- Attach documentation corroborating each data source (i.e., *certified statement, report, bibliographical reference to a published document*). In the case of a published document or a government report, providing copies of the cover and pertinent pages may be helpful.

## 8. METHODOLOGY FOR NEW ANALYSIS

Statistical Analysis of Gage Records (*use Attachment A*)  
 Regional Regression Equations (*use Attachment B*)  
 Precipitation/Runoff Model (*use Attachment C*)  
 Other (*specify; attach backup computations and supporting data*) \_\_\_\_\_

Gaging Station: N/A

Gage Location (latitude and longitude): \_\_\_\_\_

\_\_\_\_\_

**For areas which have detailed flooding:**

Full input and output listings along with files on diskette (if available) for each of the models listed below (items 1, 2, 3, 4, and 5) and summary of the source of input parameters used in the models must be provided. The summary must include a complete description of any changes made from model to model (e.g. duplicate effective model to corrected effective model). At a minimum, the Duplicate Effective (item 1) and the Revised or Post-Project Conditions (item 4) models must be submitted. See instructions for directions on when other models may be required.

**For areas which do not have detailed flooding:**

Only the 100-year flood profile is required. A hydraulic model is not required for areas which do not have detailed flooding; however, BFEs may not be added to the revised FIRM. If a hydraulic model is developed for the area, items 3 and 4 described below must be submitted.

If hydraulic models are not developed, hydraulic analyses for existing or pre-project conditions and revised or post-project conditions must be submitted. All calculations must be submitted for these analyses. (See item 6 below)

## 1. Duplicate Effective Model

Copies of the hydraulic analysis used in the effective FIS, referred to as the effective models (*10-, 50-, 100-, and 500-year multi-profile runs and the floodway run*) must be obtained and then reproduced on the requestor's equipment to produce the duplicate effective model. This is required to assure that the effective model input data has been transferred correctly to the requestor's equipment and to assure that the revised data will be integrated into the effective data to provide a continuous FIS model upstream and downstream of the revised reach.

Natural  Floodway

## 2. Corrected Effective Model

The corrected effective model is the model that corrects any errors that occur in the duplicate effective model, adds any additional cross sections to the duplicate effective model, or incorporates more detailed topographic information than that used in the currently effective model. The corrected effective model must not reflect any man-made physical changes since the date of the effective model. An error could be a technical error in the modeling procedures, or any construction in the floodplain that occurred prior to the date of the effective model but was not incorporated into the effective model.

Natural  Floodway

## 3. Existing or Pre-Project Conditions Model

The duplicate effective or corrected model is modified to produce the existing or pre-project conditions model to reflect any modifications that have occurred within the floodplain since the date of the effective model but prior to the construction of the project for which the revision is being requested. If no modification has occurred since the date of the effective model, then this model would be identical to the corrected effective or duplicate effective model.

Natural  Floodway

## 4. Revised or Post-Project Conditions Model

The existing or pre-project conditions model (*or duplicate effective or corrected effective model, as appropriate*) is revised to reflect revised or post-project conditions. This model must incorporate any physical changes to the floodplain since the effective model was produced as well as the effects of the project. When the request is for proposed project this model should reflect proposed conditions.

Natural  Floodway

5. Other: Please attach a sheet describing all other models submitted.

Natural  Floodway

## 6. Hydraulic Analyses (Only if Hydraulic Models are not developed)

Please attach all calculations for the existing or pre-project conditions and the revised or post-project conditions. Proceed to Form 5, "Riverine/Coastal Mapping Form".

1. Discharges:	Upstream Limit	Downstream Limit
10-year .....	—	—
50-year .....	—	—
100-year .....	926	926
500-year .....	—	—

Attach diagram showing changes in 100-year discharge

2. Explain how the starting water surface elevations were determined USING MANNING'S EQUATION WITH BED SLOPE DETERMINED FROM MAPS AND CHANNEL GEOMETRY DETERMINED BY SITE VISIT

3. Give range of friction loss coefficients (Manning's "N") Channel ..... 0.040  
Overbanks ..... 0.060

If friction loss coefficients are different anywhere along the revised reach from those used to develop the FIRM, give location, value used in the effective FIS, and revised values and an explanation as to how the revised values were determined.

<u>Location</u>	<u>FIS</u>	<u>Revised</u>

Explain: \_\_\_\_\_  
\_\_\_\_\_

4. Describe how the cross section geometry data were determined (e.g., field survey, topographic map, taken from previous study) and list cross sections that were added.

CROSS SECTION LOCATIONS BASED ON INFORMATION PROVIDED ON FIRM MAPS  
WITH ADDITIONAL LOCATIONS ADDED AT DRAINAGE BASIN AND AT CULVERTS  
ELEVATIONS BASED ON AERIAL MAPPING AND USGS BENCHMARKS

5. Were natural channel banks selected as the location of the left and right channel banks in the model?

Yes  No If no, explain why not: \_\_\_\_\_  
\_\_\_\_\_

6. Explain how reach lengths for channel and overbanks were determined:

REACH LENGTHS DETERMINED FROM INFORMATION PROVIDED ON FIRM MAPS AND ADDITIONAL CROSS-SECTIONS.

## 5. RESULTS (from model used to revise 100-year water surface elevations)

1. Do the results indicate:

a. Water surface elevations higher than end points of cross sections? .....  Yes  No

b. Supercritical depth? .....  Yes  No

c. Critical depth? .....  Yes  No

d. Other unique situations .....  Yes  No

If yes to any of the above, attach an explanation that discusses the situation and how it is presented on the profiles, tables, and maps.

2. What is the maximum change in energy gradient between cross-sections? ..... 11.02 ft

Specify location ..... SECTION 9 TO 10

3. What is the distance between the cross-sections in 2 above? ..... 567 ft

4. What is the maximum distance between cross-sections? ..... 566 ft

Specify location ..... SECTION 3 TO 4

5. Floodway determination

a. What is the maximum surcharge allowed by the community or State? ..... 1.0

foot

b. What is the maximum surcharge for the revised conditions? ..... 0.0

foot

Specify location ..... —

c. What is the maximum velocity? ..... 9.22

fps

Specify location ..... SECTION 8

d. Are there any negative surcharge values at any cross-section?

Yes  No

If yes, the floodway may need to be widened. If it is not widened, please explain and indicate the maximum negative surcharge.

Explain:

---

---

---

6. Is the discharge value used to determine the floodway anywhere different from that used to determine the natural 100-year flood elevations? .....  Yes  No

If Yes, explain:

---

---

---

7. Do 100-year water surface elevations increase at any location? .....  Yes  No

If yes, please attach a list of the locations where the increases occur, state whether or not the increases are located on the requestor's property, and provide an explanation of the reason for the increases. (For example: State if the increase is due to fill placed within the floodway fringe or placed within the currently adopted floodway limits)

SECTIONS 6, 5 & 4 HAVE INCREASED USE AS COMPARED TO PRE-DEVELOPED COND'S  
DUE TO PROSS SECTION LOCATION NEAR CULVERTS...

---

---

Please attach a completed comparison table entitled: Water Surface Elevation Check (See page 6)

#### 6. REVISED FIRM/FBFM AND FLOOD PROFILES

A. The revised water surface elevations tie into those computed by the effective FIS Model (10-, 50-, 100-, and 500-year), downstream of the project at cross-section \_\_\_\_\_ within \_\_\_\_\_ feet (vertical) and upstream of the project at cross section \_\_\_\_\_ within \_\_\_\_\_ feet (vertical). — *NO STUDIED CROSS SECTION DATA TO TIE INTO. i.e. UNSTUDIED AREA*

B. The revised floodway elevations tie into those computed by the effective FIS model, downstream of the project at cross section \_\_\_\_\_ within \_\_\_\_\_ feet (vertical) and upstream of the project at cross section \_\_\_\_\_ within \_\_\_\_\_ feet (vertical). — *NO STUDIED CROSS SECTION DATA TO TIE INTO, i.e. UNSTUDIED AREA*

C. Attach profiles, at the same vertical and horizontal scale as the profiles in the effective FIS report, showing stream bed and profiles of all floods studied (without encroachment). Also, label all cross sections, road crossings (including low chord and top-of-road data), culverts, tributaries, corporate limits, and study limits. If channel distance has changed, the stationing should be revised for all profile sheets.

D. Attach a Floodway Data Table showing data for each cross section listed in the published Floodway Data Table in the FIS report.

Proceed to Riverine /Coastal Mapping Form

Sheet 1 of 1 MT-2 / Form 4 Page 6 of 6

ORCHARD AVENUE LOMR  
RIVERLINE HYDRAULIC ANALYSIS FORM

Section 5 - Results

Item 1c. Critical Depth

Critical depth occurs at the following Sections: 3, 7, 8, & 10. Critical flow is present at Section 3 due to two 90 bends in the narrow channel. Sections 7 & 8 reach critical depth due to a flow constriction. Section 10 is located at the downstream end of a culvert which has a drop condition at the pipe outlet. No other sections reach critical depth.

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1.5 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

Community Name: CANON CITY, COLORADO

Flooding Source: NE CANON DRAINAGE AREA (SUB-BASIN FROM NE)

Project Name/Identifier: ORCHARD AVENUE LETTER OF MAP REVISION

## 1. MAPPING CHANGES

1. A topographic work map of suitable scale, contour interval, and planimetric definition must be submitted showing (indicate N/A when not applicable):

Included

A. Revised approximate 100-year floodplain boundaries (Zone A) .....	<input checked="" type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input type="checkbox"/>	N/A
B. Revised detailed 100- and 500-year floodplain boundaries .....	<input type="checkbox"/>	Yes	<input checked="" type="checkbox"/>	No	<input type="checkbox"/>	N/A
C. Revised 100-year floodway boundaries .....	<input checked="" type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input type="checkbox"/>	N/A
D. Location and alignment of all cross sections used in the revised hydraulic model with stationing control indicated .....	<input checked="" type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input type="checkbox"/>	N/A
E. Stream alignments, road and dam alignments .....	<input type="checkbox"/>	Yes	<input checked="" type="checkbox"/>	No	<input type="checkbox"/>	N/A
F. Current community boundaries .....	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input checked="" type="checkbox"/>	N/A
G. Effective 100- and 500-year floodplain and 100-year floodway boundaries from the FIRM/FBFM reduced or enlarged to the scale of the topographic work map .....	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input checked="" type="checkbox"/>	N/A
H. Tie-ins between the <u>effective</u> and <u>revised</u> 100- and 500-year floodplains and 100-year floodway boundaries .....	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input checked="" type="checkbox"/>	N/A
I. The requestor's property boundaries and community easements .....	<input checked="" type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input type="checkbox"/>	N/A
J. The signed certification of a registered professional engineer .....	<input checked="" type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input type="checkbox"/>	N/A
K. Location and description of reference marks .....	<input checked="" type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input type="checkbox"/>	N/A
L. Vertical datum (example: NGVD, NAVD etc.) .....	<input checked="" type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input type="checkbox"/>	N/A
M. Coastal zone designations tie into adjacent areas not being revised .....	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input checked="" type="checkbox"/>	N/A
N. Location and alignment of all coastal transects used to revise the coastal analyses .....	<input type="checkbox"/>	Yes	<input type="checkbox"/>	No	<input checked="" type="checkbox"/>	N/A

If any of the items above are marked no or N/A, please explain: \_\_\_\_\_

No DATA AVAILABLE

2. What is the source and date of the updated topographic information (example: orthophoto maps, July 1985; field survey, May 1979, beach profiles, June 1987, etc.)? AERIAL PHOTOGRAPHY, 1979, 1995 & FIELD SURVEY

FLOOD HAZARD ANALYSIS, JANUARY 1996

3. What is the scale and contour interval of the following workmaps?

a. Effective FIS 400' scale 2' Contour interval  
b. Revision Request 100' scale 1' Contour interval

NOTE: Revised topographic information must be of equal or greater detail.

4. Attach an annotated FIRM and FBFM at the scale of the effective FIRM and FBFM showing the revised 100-year and 500-year floodplains and the 100-year floodway boundaries and how they tie into those shown on the effective FIRM and FBFM downstream and upstream of the revision or adjacent to the area of revision for coastal studies.

Attach additional pages if needed.

1. MAPPING CHANGES (Cont'd)

5. Flood Boundaries and 100-year water surface elevations:

Has the 100-year floodplain been shifted or increased or the 100-year water surface elevation increased at any location on property other than the requestor's or community's?  Yes  No

If yes, please give the location of shift or increase and an explanation for the increase.

---

---

---

a. Have the affected property owners been notified of this shift or increase and the effect it will have on their property? .....  Yes  No

If yes, please attach letters from these property owners stating they have no objections to the revised flood boundaries if a LOMR is being requested.

b. What is the number of insurable structures that will be impacted by this shift or increase? \_\_\_\_\_

6. Have the floodway boundaries shifted or increased at any location compared to those shown on the effective FBFM or FIRM? .....  Yes  No

If yes, explain:

PREVIOUS FLOODWAY DEFINITION WAS APPROXIMATE

---

---

---

7. If a V-zone has been designated, has it been delineated to extend landward to the heel of the primary frontal dune?  Yes  No

If no, explain:

---

---

---

8. Manual or digital map submission:

Manual  
 Digital

Digital map submissions may be used to update digital FIRMs (DFIRMs). For updating DFIRMs, these submissions must be coordinated with FEMA Headquarters as far in advance of submission as possible.

2. EARTH FILL PLACEMENT

1. The fill is:  Existing  Proposed
2. Has fill been/will be placed in the regulatory floodway? .....  Yes  No  
If yes, please attach completed Riverine Hydraulic Analysis Form.
3. Has fill been/will be placed in floodway fringe (*area between the floodway and 100-year floodplain boundaries*)? .....  Yes  No

If yes, then complete A, B, C, and D below.

- A. Are fill slopes for granular materials steeper than one vertical on one-and-one-half horizontal? .....  Yes  No  
If yes, justify steeper slopes \_\_\_\_\_
- B. Is adequate erosion protection provided for fill slopes exposed to moving flood waters? (*Slopes exposed to flows with velocities of up to 5 feet per second (fps) during the 100-year flood must, at a minimum, be protected by a cover of grass, vines, weeds, or similar vegetation; slopes exposed to flows with velocities greater than 5 fps during the 100-year flood must, at a minimum, be protected by stone or rock riprap.*) .....  Yes  No

If no, describe erosion protection provided \_\_\_\_\_

- C. Has all fill placed in revised 100-year floodplain been compacted to 95 percent of the maximum density obtainable with the Standard Proctor Test Method or acceptable equivalent method?  Yes  No
- D. Can structures conceivably be constructed on the fill at any time in the future?  Yes  No

If yes, provide certification of fill compaction (item C. above) by the community's NFIP permit official, a registered professional engineer, or an accredited soils engineer.

4. Has fill been/will be placed in a V-zone?  Yes  No

If yes, is the fill protected from erosion by a flood control structure such as a revetment or seawall?  Yes  No

If yes, attach the coastal structures form.

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 1.75 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

Community Name: CANON CITY, COLORADO

Flooding Source: NE CANON DRAINAGE AREA (SUB-BASEN FROM NE)

Project Name/Identifier: ORCHARD AVENUE LETTER OF MAP REVISION

## 1. EXTENT OF CHANNELIZATION

Downstream limit: \_\_\_\_\_

Upstream limit: \_\_\_\_\_

## 2. CHANNEL DESCRIPTION

1. Describe the inlet to the channel FLOW ENTERS THE CHANNEL AT HIGH STREET VIA 2 CMP'S SIZED AT 6 FT AND 5 FT IN DIAMETER

2. Briefly describe the shape of the channel (both cross sectional and planimetric configuration) and its lining (channel bottom and sides) CHANNEL TYPICALLY TRAPEZOIDAL IN SECTION AND STRAIGHT, (NOT MEANDERING). CHANNEL BOTTOM CONSISTS OF .15 TO 20 FT.

3. Describe the outlet from the channel FLOW ENTERS A 42" RCP : AT CENTRAL AVENUE AND CONTINUES SOUTH

4. The channelization includes:

- Levees (Attach Levee Form)
- Drop structures
- Superelevated sections
- Transitions in cross sectional geometry
- Debris basin/detention basin
- Energy dissipater
- Other \_\_\_\_\_

5. Attach the following:

- a. Certified engineering drawings showing channel alignment and locations of inlet, outlet, and items checked in item 4
- b. Typical cross sections and profiles of channel banks and invert

1. What is the 100-year discharge? ..... 926 cfs

2. Do the cross sections in the hydraulic model match the typical cross sections in the plans?  Yes  No

3. Are the channel banks higher than the 100-year flood elevations everywhere? .....  Yes  No

4. Are the channel banks higher than the 100-year flood energy grade lines everywhere? ...  Yes  No

5. Is the land on both sides of the channel above the adjacent 100-year flood elevation at all points along the channel? .....  Yes  No

6. What is the range of freeboard? ..... 0 - 2 feet

7. What is the range of the 100-year flood velocities? ..... 0.20 - 9.22 ft/sec

8. What is the lining type? (both bottom and sides) ROCK RIPRAP IN HIGH VELOCITY AREAS

Explain how the channel lining prevents erosion and maintains channel stability (attach documentation)

9. What is the design elevation in the channel based on?

Subcritical flow  
 Critical flow  
 Supercritical flow  
 Energy grade line

Is 100-year flood profile based on the above type of flow? .....  Yes  No

If no, explain: \_\_\_\_\_

10. Is there the potential for a hydraulic jump at the following locations?

Inlet to channel .....  Yes  No  
 Outlet of channel .....  Yes  No  
 At Drop Structures .....  Yes  No  
 At Transitions .....  Yes  No  
 Other locations. Explain: \_\_\_\_\_

If the answer to any of the above is yes, please explain how the hydraulic jump is controlled and the effects of the hydraulic jump on the stability of the channel.

Explain: \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_  
 \_\_\_\_\_

1.
  - A. Is there any indication from historical records that sediment transport (including scour and deposition) can affect the 100-year water surface elevations and/or the capacity of the channel? .....  Yes  No
  - B. Based on the conditions of the watershed and stream bed, is there a potential for sediment transport (including scour and deposition) to affect the 100-year water surface elevations and /or the capacity of the channel? .....  Yes  No
2. If the answer to either 1A or 1B is yes:
  - A. What is the estimated sediment (bed) load?  
\_\_\_\_\_ cfs (attach gradation curve)
  - Explain method used to estimate load \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_
  - B. Is the 100-year flood velocity anywhere within the channel less than the 100-year flood velocity of the inlet?  Yes  No
  - C. Will sediment accumulate anywhere within the channel?  Yes  No
  - D. Will deposition or scour occur at or near the inlet?  Yes  No
  - E. Will deposition or scour occur at or near the outlet?  Yes  No

Attach documentation showing affects on the Hydrologic and Hydraulic analyses

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 2 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

Community Name: CANON CITY, COLORADO

Project Name/Identifier: ORCHARD AVENUE LETTER OF MAP REVISION

## 1. IDENTIFIER

1. Name of roadway, railroad, etc.: HIGH STREET
2. Location of bridge/culvert along flooding source (in terms of stream distance or cross-section identifier):  
BETWEEN SECTION 10 AND 11
3. This revision reflects (check one of the following):  
 New bridge/culvert not modeled in the FIS  
 Modified bridge/culvert previously modeled in the FIS  
 New analysis of bridge/culvert previously modeled in the FIS  
(Explain why new analysis was performed)  

---

---

---

## 2. BACKGROUND

Provide the following information about the structure:

1. Dimension, material, and shape (e.g. two 10 x 5 feet reinforced concrete box culvert; three 30-foot span bridge with 2 rows of two 3- foot diameter circular piers; 40-foot wide ogee shape spillway) TWO CORRUGATED METAL PIPES 5-FOOT AND 6-FOOT IN DIAMETER, 1 FOOT APART
2. Entrance geometry of culvert/type of bridge opening (e.g. 30° - 75° wing walls with square top edge, sloping embankments and vertical abutments) VERTICAL HEAD WALL WITH TWO FEET OF ALLOWABLE HEAD ABOVE 6 FT. DIA. PIPE
3. Hydraulic model used to analyze the structure (e.g., HEC-2 with special bridge routine, WSPRO, HY8) HEC-RAS

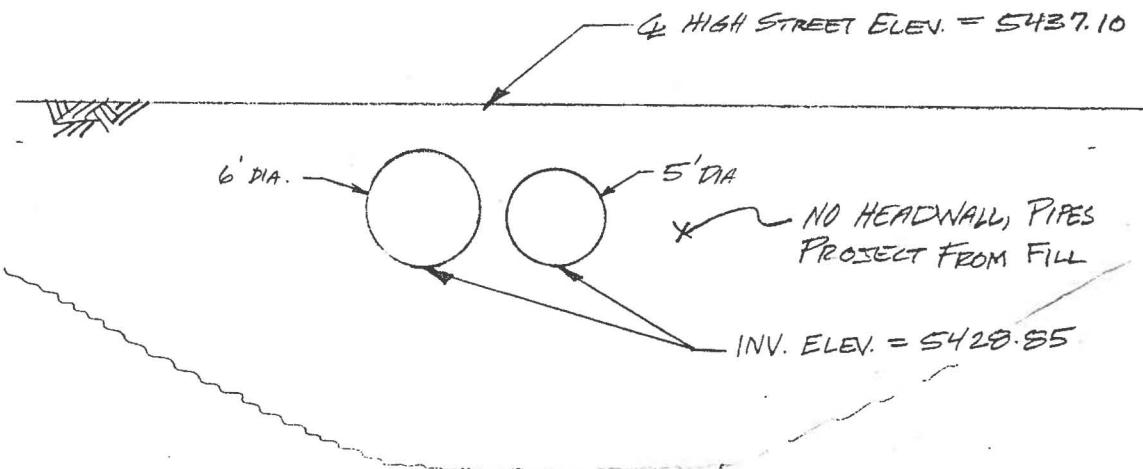

If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structure(s). (Attach justification)

Note: If any items do not apply to submitted hydraulic analysis, indicate by N/A

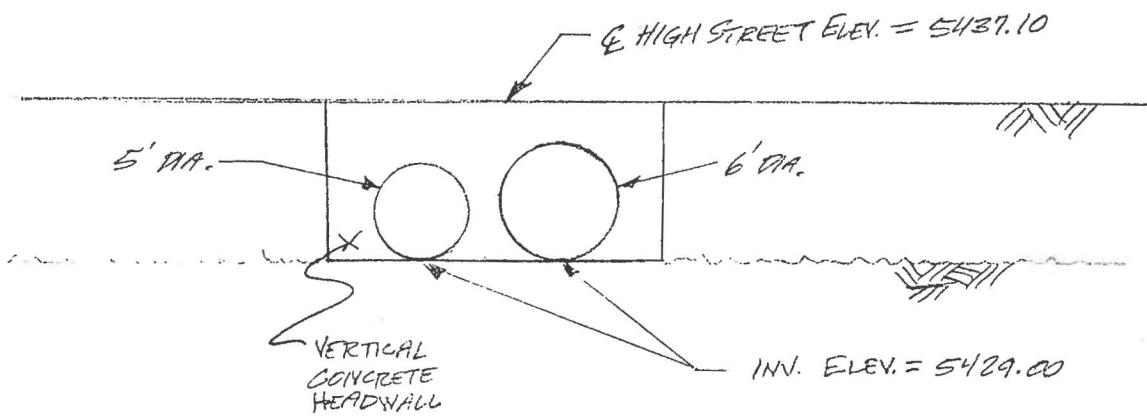

\* One form per new/revised bridge/culvert

### 3. ANALYSIS

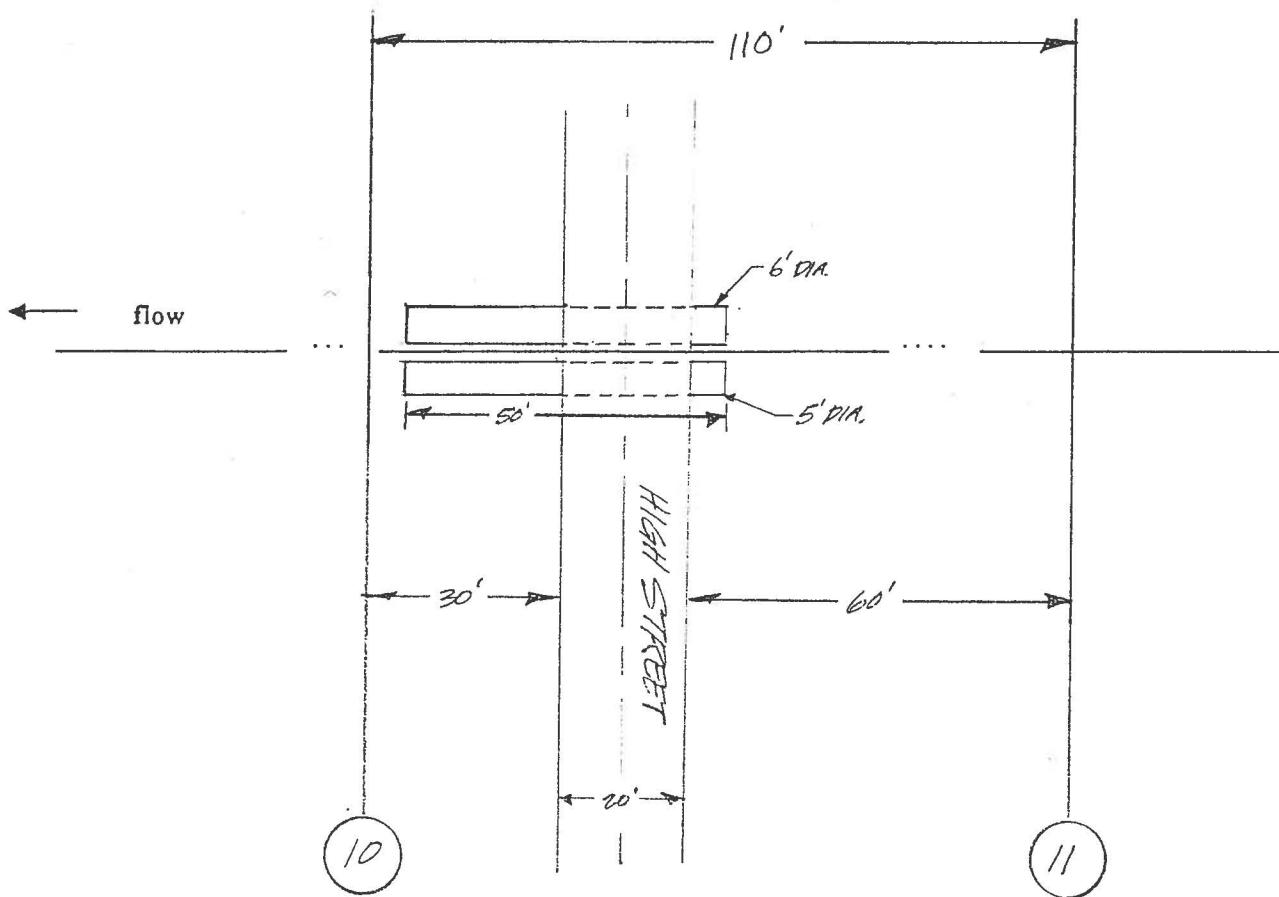

Sketch the downstream face of the structure together with the road profile. Show, at a minimum, the maximum low chord elevation, invert elevation, and minimum top of road elevation, and ineffective flow widths.

Sketch the upstream face of the structure together with the road profile. Show, at a minimum, the maximum low chord elevation, invert elevation, and minimum top of road elevation.

Sketch the plan view of the structure(s) Show, at a minimum, the skew angle, cross-section locations, distances between cross sections, and length of structure (s).

Attach plans of the structure (s) certified by a registered Professional Engineer.

Contraction loss coefficient	<u>0.1</u>
Expansion loss coefficient	<u>0.3</u>

## 4. SEDIMENT TRANSPORT CONSIDERATIONS

1. A. Is there any indication from historical records that sediment transport (*including scour and deposition*) can affect the 100-year water surface elevations? .....  Yes  No

B. Based on the conditions (*such as geomorphology, vegetative cover and development of the watershed and stream bed, and bank conditions*), is there a potential for debris and sediment transport (*including scour and deposition*) to affect the 100-year water surface elevations and/or conveyance capacity through the bridge/culvert? .....  Yes  No

2. If the answer to either 1A or 1B is yes:

A. What is the estimated sediment (bed material) load?  
\_\_\_\_\_ cfs (attach gradation curve)

Explain method used to estimate the sediment transport and the depth of scour and/or deposition \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

B. Will sediment accumulate anywhere through the bridge/culvert?  Yes  No

If yes, explain the impact on the conveyance capacity through the bridge/culvert? \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

## 5. FLOODWAY ANALYSIS

Explain method of bridge encroachment

(floodway run)

N/A

Comments (explain any unusual situations):

Attach analysis.

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 2 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

## 4. SEDIMENT TRANSPORT CONSIDERATIONS

1. A. Is there any indication from historical records that sediment transport (*including scour and deposition*) can affect the 100-year water surface elevations? .....  Yes  No
- B. Based on the conditions (*such as geomorphology, vegetative cover and development of the watershed and stream bed, and bank conditions*), is there a potential for debris and sediment transport (*including scour and deposition*) to affect the 100-year water surface elevations and/or conveyance capacity through the bridge/culvert? .....  Yes  No
2. If the answer to either 1A or 1B is yes:
  - A. What is the estimated sediment (*bed material*) load?  
\_\_\_\_\_ cfs (attach gradation curve)
  - B. Explain method used to estimate the sediment transport and the depth of scour and/or deposition  
\_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
  - \_\_\_\_\_
- B. Will sediment accumulate anywhere through the bridge/culvert?  Yes  No  
If yes, explain the impact on the conveyance capacity through the bridge/culvert?  
\_\_\_\_\_

## 5. FLOODWAY ANALYSIS

Explain method of bridge encroachment  
(floodway run) \_\_\_\_\_

*N/A*

## 5. FLOODWAY ANALYSIS (Cont'd)

Comments (explain any unusual situations):

Attach analysis.

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 2 hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

Community Name: CANON CITY, COLORADO

Flooding Source: NE CANON DRAINAGE AREA ( SUB - BASIN FROM NE )

Project Name/Identifier: ORCHARD AVENUE LETTER OF MAP REVISION

## 1. IDENTIFIER

1. Name of roadway, railroad, etc.: SOUTH STREET
2. Location of bridge/culvert along flooding source (in terms of stream distance or cross-section identifier):  
APPROX. 40 ft. NORTH OF SECTION 4
3. This revision reflects (check one of the following):  
 New bridge/culvert not modeled in the FIS  
 Modified bridge/culvert previously modeled in the FIS  
 New analysis of bridge/culvert previously modeled in the FIS  
(Explain why new analysis was performed)  
  

---

---

---

## 2. BACKGROUND

Provide the following information about the structure:

1. Dimension, material, and shape (e.g. two 10 x 5 feet reinforced concrete box culvert; three 30-foot span bridge with 2 rows of two 3- foot diameter circular piers; 40-foot wide ogee shape spillway)  
ONE REINFORCED CONCRETE PIPE 48" IN DIAMETER
2. Entrance geometry of culvert/type of bridge opening (e.g. 30° - 75° wing walls with square top edge, sloping embankments and vertical abutments)  
VERTICAL HEADWALL. WITH 30° WING WALLS
3. Hydraulic model used to analyze the structure (e.g., HEC-2 with special bridge routine, WSPRO, HY8)  
HEC-RAS

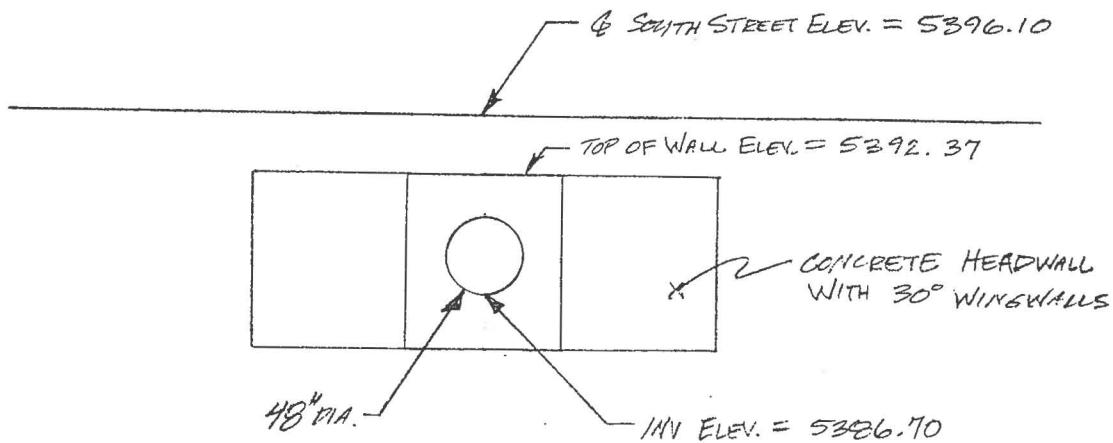

If different than hydraulic analysis for the flooding source, justify why the hydraulic analysis used for the flooding source could not analyze the structure(s). (Attach justification)

Note: If any items do not apply to submitted hydraulic analysis, indicate by N/A

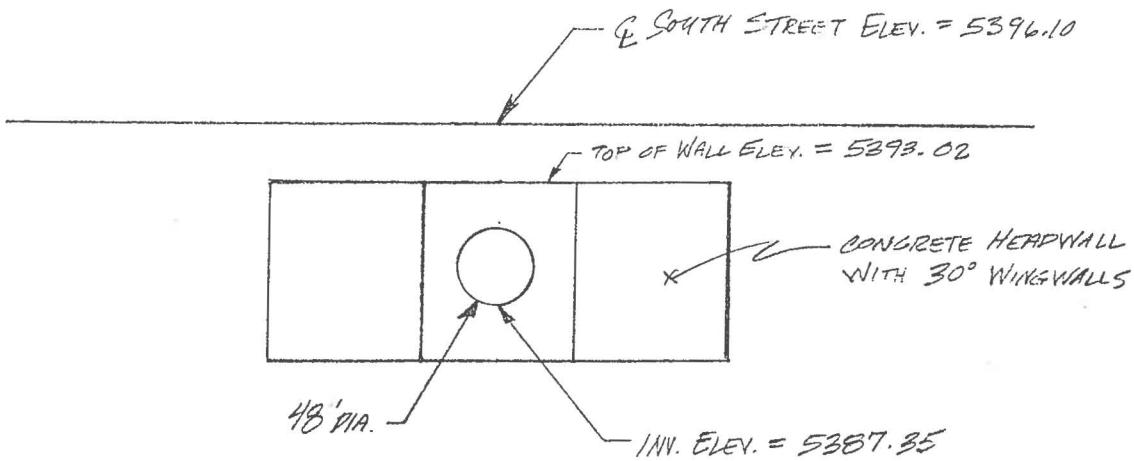

\* One form per new/revised bridge/culvert

### 3. ANALYSIS

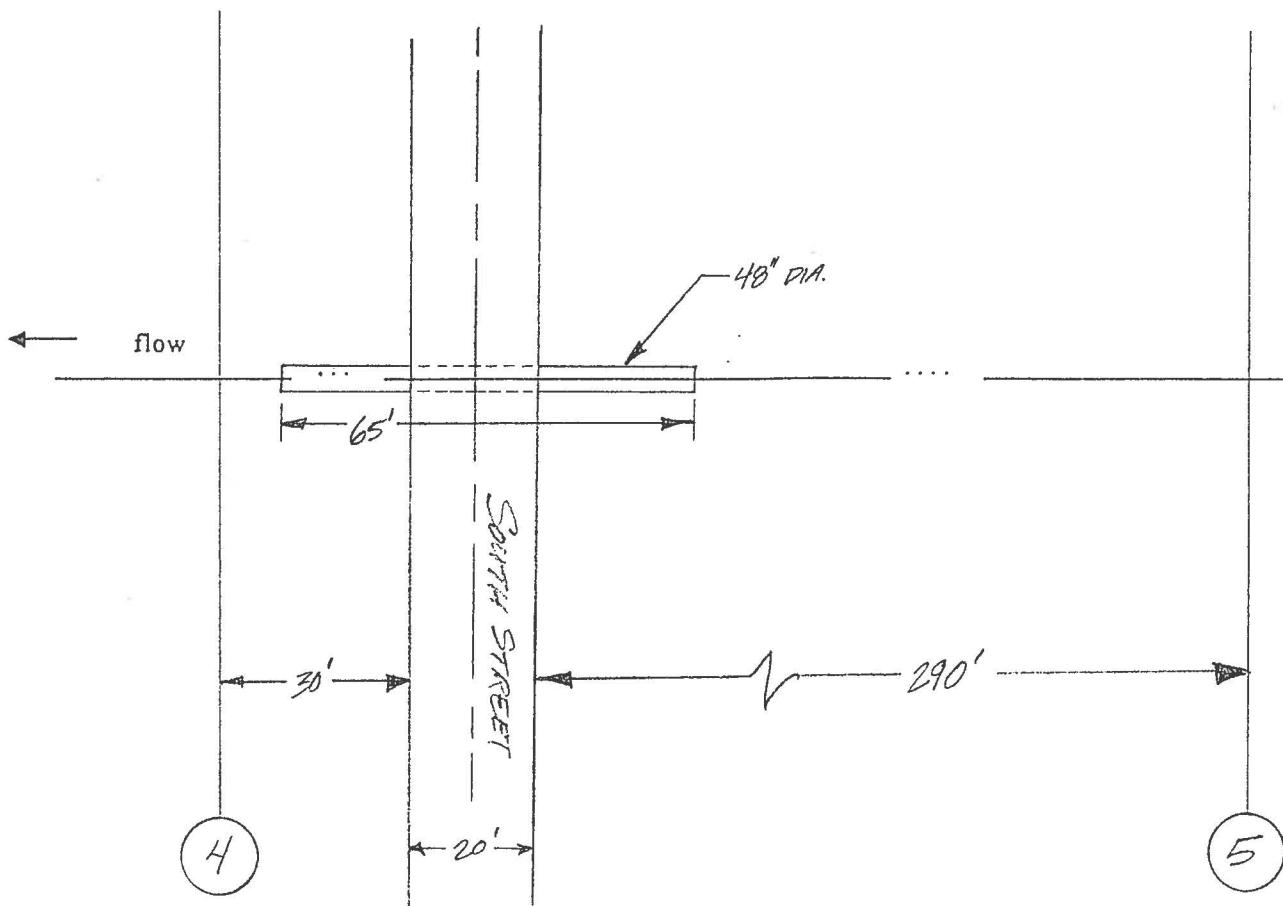

Sketch the downstream face of the structure together with the road profile. Show, at a minimum, the maximum low chord elevation, invert elevation, minimum top of road elevation, and ineffective flow widths.

Sketch the upstream face of the structure together with the road profile. Show, at a minimum, the maximum low chord elevation, invert elevation, and minimum top of road elevation.

Sketch the plan view of the structure(s) Show, at a minimum, the skew angle, cross-section locations, distances between cross sections, and length of structure (s).

Attach plans of the structure (s) certified by a registered Professional Engineer.

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 3.0. hours per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

Community Name: CANON CITY, COLORADOFlooding Source: NE CANON DRAINAGE AREA (SUB-BASIN FROM NE)Project Name/Identifier: ORCHARD AVENUE LETTER OF MAP REVISION

REACH TO BE REVISED

Downstream limit: 30 ft DOWNSTREAM OF SOUTH STREETUpstream limit: 2000 ft UPSTREAM OF SOUTH STREET

This Levee/Floodwall analysis is based on:

- upgrading of an existing levee/floodwall system
- a newly constructed levee/floodwall system
- reanalysis of an existing levee/floodwall system

## LEVEE/FLOODWALL SYSTEM ELEMENTS

## 1. Levee elements and locations are:

- earthen embankment, dike, berm etc.
- structural floodwall
- other (describe) \_\_\_\_\_

Station 1 to 11  
Station \_\_\_\_\_ to \_\_\_\_\_  
Station \_\_\_\_\_ to \_\_\_\_\_

## Structural Type:

- monolithic cast-in place reinforced concrete
- reinforced concrete masonry block
- sheet piling
- other (describe) \_\_\_\_\_

## 2. Has this levee/floodwall system been certified by a Federal agency to provide protection against the 100-year flood event?

Yes  No

If yes, by which agency? \_\_\_\_\_

If yes, complete only the interior drainage section on pages 7 and 8 of this form and the operation and maintenance section of Revision Requestor and Community Official Form.

3. Attach certified drawings containing the following information (indicate drawing sheet numbers):

- a. Plan of the levee embankment and floodwall structures. Sheet Numbers 5
- b. A profile of the levee/floodwall system showing the 100-year water surface elevations, levee and/or wall crest and foundation, and closure locations for the total levee system. Sheet Numbers 6
- c. A profile of the 100-year water surface elevation, closure opening outlet and inlet invert elevations, type and size of opening, and kind of closure device. Sheet Numbers 6
- d. A layout detail for the embankment protection measures. Sheet Numbers 3
- e. Location, layout, and size and shape of the levee embankment features, foundation treatment, floodwall structure, closure structures, and pump stations. Sheet Numbers 3, 5

## FREEBOARD

1. The minimum freeboard provided above the 100-year water surface elevation is:

### Riverine

- 3.0 feet or more at the downstream end and throughout
- 3.5 feet or more at the upstream end
- 4.0 feet immediately upstream and downstream of all structures and constrictions

Yes  No  
 Yes  No  
 Yes  No

## Coastal

1.0 foot above the height of the one percent wave for the 100-year stillwater surge elevation or maximum wave runup (whichever is greater).

Yes  No

2.0 feet above 100-year stillwater surge elevation

Yes  No

Please note, occasionally exceptions are made to the minimum freeboard requirement. If an exception is requested, attach documentation addressing Part 65.10 (b) (1) (ii) of the National Flood Insurance Program regulations.

If no is answered to any of the above, please explain where and why:

2. Is there an indication from historical records that ice-jamming can effect the 100-year water surface elevation?  
 Yes  No If yes, provide ice-jam analysis profile and evidence that the minimum freeboard discussed

3. Tabulate the elevations at critical locations (tabulate values at each levee crest grade change).

(Extend table on an added sheet as needed and reference)

## SEDIMENT TRANSPORT CONSIDERATIONS

1. A. Is there any indication from historical records that sediment transport (including scour and deposition) can affect the 100-year water surface elevations?  
 Yes  No

B. Based on the conditions (such as geomorphology, vegetative cover and development of the watershed and stream bed, and bank conditions), is there a potential for debris and sediment transport (including scour and deposition) to affect the 100-year water surface elevations and/or the freeboard for the levee/floodwall?  
 Yes  No

2. If the answer to either 1A or 1B is yes:

A. What is the estimated sediment (bed material) load?  
       cfs (attach gradation curve)

Explain method used to estimate the sediment transport and the depth of scour and/or deposition

---

---

---

---

B. Will sediment accumulate anywhere along the levee/floodwall (such as along any bends in the channel)?

Yes  No

If yes, what is the minimum freeboard at these locations? \_\_\_\_\_ feet.

## CLOSURES

1. Openings through the levee system:

exist  do not exist

If openings exist, list all closures:

Channel Station	Left or Right Bank	Opening Type	Highest Elevation for Opening Invert	Type of Closure Device
5.5	N/A	NOTCH WIER	5402.74	NONE

(Extend table on an added sheet as needed and reference)

## Geotechnical and geologic data:

In addition to the required detail analysis reports, data obtained during field and laboratory investigations and used in the design analysis should be submitted in a tabulated summary form for the following levee system features. (Reference U.S. Army Corps of Engineers EM-1110-2-1906 Form 2086).

## EMBANKMENT PROTECTION

1. The maximum levee slope landside is 3:1

2. The maximum levee slope floodside is 3:1

3. The range of 100-year riverine flood velocities along the levee? 1.01 (min.)  
to 0.04 (max.)

Embankment material is protected by (describe the kind):

18" GRAVITY RIPRAP (D<sub>50</sub> = 18") 36" THICK

Riprap Design Parameters: (Include references)

Velocity;

Tractive stress

<u>Reach</u>	<u>Sideslope</u>	<u>Flow depth</u>	<u>Velocity</u>	<u>Curve or Straight</u>	<u>Stone Riprap</u>	<u>Depth of Toedown</u>	
<u>Reach</u>	<u>Sideslope</u>	<u>Flow depth</u>	<u>Velocity</u>	<u>Curve or Straight</u>	<u>D<sub>100</sub></u>	<u>D<sub>50</sub></u>	<u>Thickness</u>
Sta <u>6</u> to <u>—</u>	<u>3:1</u>	<u>1.17'</u>	<u>0.04</u>	<u>STRAIGHT</u>	<u>18"</u>	<u>36"</u>	<u>N/A</u>
Sta <u>5</u> to <u>—</u>	<u>3:1</u>	<u>7.60</u>	<u>1.01</u>	<u>STRAIGHT</u>	<u>18"</u>	<u>36"</u>	<u>N/A</u>
Sta <u>—</u> to <u>—</u>							

(Extend table on an added sheet as needed and reference)

Has a bedding/filter analysis and design been included  Yes  No

Describe the analysis for other kinds of protection used (include copies of the design analysis):

Note: Attach engineering analysis to support construction plans.

1. Identify locations and describe the basis for selection of critical locations for analyses: STATIONS ARE LOCATED U/S AND D/S OF BERM TO MODEL CULVERT FLOWS ADEQUATELY

Overall height: Sta 5.5, height 13 ft.

Limiting foundation soil strength:

Sta 5.5, depth 9 ft to 30 ft (FROM EMBANKMENT TOP)

strength  $\phi = 0$  degrees,  $c = 250$  psf

slope:  $SS = 3$  (h) to 1 (v)

(Repeat as needed on an added sheet for additional slopes and locations)

2. Specify the embankment stability analyses methodology used (e.g. circular arc, sliding block, infinite slope, etc.): CIRCULAR ARC (BISHOP'S MODIFIED)

3. Summary of stability analysis results:

<u>Case</u>	<u>Loading Conditions</u>	<u>Critical Safety Factor</u>	<u>Criteria (Min.)</u>
I	End of construction	<u>1.41</u>	1.3
II	Sudden drawdown	<u>N/A</u>	1.0
III	Critical flood stage	<u>1.43</u>	1.4
IV	Steady seepage at flood stage	<u>N/A</u>	1.4
VI	Earthquake (Case I)	<u>N/A</u>	1.0

(Reference: U.S. Army Corps of Engineers EM-1110-2-1913 Table 6-1)

4. Was a seepage analysis for the embankment performed?  Yes  No

Describe methodology used: \_\_\_\_\_

5. Was a seepage analysis for the foundation performed?  Yes  No

Were uplift pressures at the embankment landside toe checked?  Yes  No

Were seepage exit gradients checked for piping potential?  Yes  No

6. The duration of 100-year flood hydrograph against the embankment is 24 Hrs.

Note: Attach engineering analysis to support construction plans.

Attn: Mr. Michael Bartusek, P.E.

Subject: Proposed Detention Embankment, Orchard Avenue Detention Pond, Cañon City,  
Colorado

Project No. 96-557

Gentlemen:

In accordance with your request, we have prepared this letter to address stability of the embankment slopes for the Orchard Avenue Detention Pond. In order to prepare this letter, we have reviewed our December 18, 1996, report entitled "Geotechnical Engineering Study, Proposed Orchard Detention Pond, Canon City, Colorado," and your April 8, 1998, correspondence, including the sheet entitled "Embankment and Foundation Stability."

It is understood that the embankment was constructed of on-site clay soils with slopes at an inclination of 3 horizontal to 1 vertical on both the pond side and exterior side. The pond side of the embankment was constructed to a maximum height of 13 feet by excavation of approximately 4 feet of soil from the toe of the slope and the placement of approximately 9 feet of fill. The exterior slope was constructed to a maximum height of approximately 9 feet by the placement of fill.

We have performed stability analysis of the proposed embankment slopes. Strength parameters were estimated based on pocket penetrometer testing, index property tests and sampler penetration blow counts. The parameters used for the analysis are presented in the following table:

Soil Type	Unit Weight (pcf)	Angle of Internal	Cohesion (psf)
Clay Fill	120	0	750
Native Clay	110	0	250

As stability will increase with time, long-term stability was not analyzed. Due to the short detention period, less than 24 hours, it is assumed that the embankment soils, of relatively low hydraulic conductivity, will not become saturated and that pore pressure buildup will not

Associated Design Professionals, Inc.  
April 30, 1998  
Page 2

occur. Therefore, sudden drawdown and steady seepage at flood stage analyses were not required. Analysis was performed for the slopes for end-of-construction conditions, with the pond empty, and for critical flood stage, with the pond full.

The table below indicates the minimum factors of safety determined for the conditions analyzed.

Case	Loading Condition	Minimum Factor of Safety	Criteria (minimum)
I	End of Construction	1.41	1.3
II	Sudden Drawdown	N/A	1.0
III	Critical Flood Stage	1.43	1.4
IV	Steady Seepage at	N/A	1.4
VI	Earthquake (Case I)	N/A	1.0

Based on these results, it is our opinion that the embankment slopes as constructed have adequate factors of safety against deep-seated and surficial failure. We have completed and enclosed the embankment and foundation stability worksheet.

If you have any questions regarding this letter, or if we may be of further service, please contact the undersigned at your convenience.

Sincerely,

KUMAR & ASSOCIATES, INC.

Juan C. Sorensen, P.E.

Enclosure

## 1. Describe analysis submittal based on Code:

UBC (1988) or  Other (specify) \_\_\_\_\_

## 2. Stability analysis submitted provides for:

Overturning;  Sliding; If not, explain \_\_\_\_\_

## 3. Loading included in the analyses were:

Lateral earth @  $P_A$  = \_\_\_\_\_ psf;  $P_B$  = \_\_\_\_\_ psf

Surcharge--Slope @ \_\_\_\_\_,  surface \_\_\_\_\_ psf

Wind @  $P_w$  = \_\_\_\_\_ psf

Seepage (Uplift) \_\_\_\_\_  Earthquake @  $P_{eq}$  = \_\_\_\_\_ %g

100-year significant wave height \_\_\_\_\_ ft.

100-year significant wave period \_\_\_\_\_ sec.

## 4. Summary of Stability Analysis Results: Factors of Safety. Itemize for each range in site layout dimension and loading condition limitation for each respective reach.

Loading Condition	Criteria (Min)		Sta Overturn	To Sliding	Sta Overturn	To Sliding
	Overtur	Sliding				
Dead & Wind	1.5	1.5	_____	_____	_____	_____
Dead & Soil	1.5	1.5	_____	_____	_____	_____
Dead, Soil, Flood & Impact	1.5	1.5	_____	_____	_____	_____
Dead, Soil & Seismic	1.3	1.3	_____	_____	_____	_____

(Ref: FEMA 114 Sept 1986; COE EM 1110-2-2502)

(Note: Extend table on an added sheet as needed and reference)

## 5. Foundation bearing strength for each soil type:

<u>Bearing Pressure</u>	<u>Sustained Load</u>	<u>Short Term Load</u>
Computed design maximum	_____ psf	_____ psf
Maximum allowable	_____ psf	_____ psf

6. Foundation scour protection  is,  is not provided, (describe)

Note: Attach engineering analysis to support construction plans.

## SETTLEMENT

1. Anticipated potential settlement has been determined and incorporated into the specified construction elevations to maintain the established freeboard margin.  Yes  No
2. The computed range of settlement is 0.25 ft. to 0.5 ft.
3. Settlement of the levee crest is determined to be primarily from:
  - Foundation consolidation
  - Embankment compression
  - Other (describe) \_\_\_\_\_
4. Differential settlement of floodwalls
  - has  has not been accommodated in the structural design and construction.

Note: Attach engineering analysis to support construction plans.

INTERIOR DRAINAGE - N/A

1. Specify size of each interior watershed
  - Draining to pressure conduit \_\_\_\_\_
  - Draining to ponding area \_\_\_\_\_
2. Relationships Established
  - Ponding elevation vs. storage  Yes  No
  - Ponding elevation vs. gravity flow  Yes  No
  - Differential head vs. gravity flow  Yes  No
3. The river flow duration curve is enclosed  Yes  No
4. Specify the discharge capacity of the head pressure conduit \_\_\_\_\_
5. Which Flooding Conditions Were Analyzed?
  - Gravity flow (Interior Watershed)  Yes  No
  - Common storm (River Watershed)  Yes  No
  - Historical ponding probability  Yes  No
  - Coastal wave overtopping  Yes  No

If no, explain why: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_
6. Interior drainage has been analyzed based on joint probability of interior and exterior flooding and the capacities of pumping and outlet facilities to provide the established level of flood protection.  Yes  No  
  

If no, explain why: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_
7. The rate of seepage through the levee system for the 100-year flood is \_\_\_\_\_ cfs

1. The length of levee system used to drive this seepage rate is \_\_\_\_\_ ft.

2. Will a pumping plant(s) be used for interior drainage?  Yes  No

If yes, include the number of pumping plants: \_\_\_\_\_  
For each pumping plant, list:

Plant #1

Plant #2

The number of pumps \_\_\_\_\_

The ponding storage capacity \_\_\_\_\_

The maximum pumping rate \_\_\_\_\_

The maximum pumping head \_\_\_\_\_

The pumping starting elevation \_\_\_\_\_

The pumping stopping elevation \_\_\_\_\_

Is the discharge facility protected? \_\_\_\_\_

Is there a flood warning plan? \_\_\_\_\_

How much time is available between  
warning and flooding? \_\_\_\_\_

Will the operations be automatic?  Yes  No

If the pumps are electric, are there backup power sources?  Yes  No

(Reference: U.S. Army Corps of Engineers EM-1110-2-3101, 3102, 3103, 3104, and 3105)

Note: Include a copy of supporting documentation of data and analysis. Provide a map showing the flooded area and maximum ponding elevations for all interior watersheds that result in flooding.

#### OTHER DESIGN CRITERIA

1. The following items have been addressed as stated:

Liquifaction  is  is not a problem.

Hydrocompaction  is  is not a problem

Heave differential movement due to soils of high shrink/swell  is  is not a problem.

2. For each of these problems, state the basic facts and corrective action taken.

---

---

---

---

If the levee/floodwall is new or enlarged, will the structure adversely impact flood levels and/or flow velocities  
floodside of the structure?

Yes  No

Note: Attach supporting documentation

The planned/installed works are in full compliance with NFIP regulations, Section 44 CFR Ch. 1.65.10

Yes  No

OPERATIONAL PLAN AND CRITERIA

1. The operation plan incorporates all the provisions for closure devices as required in Section 65.10 (c) (1), of the NFIP regulations  Yes  No *N/A*
2. The operation plan incorporates all the provisions for interior drainage as required in Section 65.10 (c) (2), of the NFIP regulations  Yes  No *N/A*

If no to either of the above, please explain.

---

---

---

---

## PUBLIC BURDEN DISCLOSURE NOTICE

Public reporting burden for this form is estimated to average 0.5 hour per response. The burden estimate includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the needed data, and completing and reviewing the form. Send comments regarding the accuracy of the burden estimate and any suggestions for reducing this burden, to: Information Collections Management, Federal Emergency Management Agency, 500 C Street, S.W., Washington, DC 20472; and to the Office of Management and Budget, Paperwork Reduction Project (3067-0148), Washington, DC 20503.

Community Name: CANON CITY, COLORADOFlooding Source: NE CANON DRAINAGE AREA (SUB-BASIN FROM NE)Project Name/Identifier: ORCHARD AVENUE LETTER OF MAP REVISION

## IDENTIFIER

Name of Dam: \_\_\_\_\_

Location of dam along flood source (in terms of stream distance or cross section identifier):

APPROXIMATELY 35' UPSTREAM OF SECTION 5 AND 853'  
DOWNSTREAM OF SECTION 6

Check one of the following:

Existing dam  
 New dam  
 Modifications of existing dam (describe modifications) \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Was the dam designed by \_\_\_\_\_ Federal agency \_\_\_\_\_ State agency  
\_\_\_\_\_  
Local government agency  Private organization?

## BACKGROUND

Does the dam have dedicated flood control storage?

 Yes  No

Does the project involve revised hydrology?

 Yes  No

If yes, complete Hydrologic Analysis Form and include calculations of the 100-year inflow flood hydrograph routed through the dam with the beginning pool at the normal pool elevation (spillway crest elevation for ungated spillway). Include any inflow hydrograph bulking by watershed sediment yield and provide necessary debris and sediment yield analysis.

Does the revised hydrology affect the 100-year water-surface elevation behind the dam or downstream of the dam?

 Yes  No

If yes, complete the Riverine Hydraulic Analysis Form and complete the table shown on the following page.

## RESULTS

## Stillwater Elevation Behind the Dam

	FIS	Revised
10-year	—	5399.74
50-year	—	5402.19
100-year	—	5403.29
500-year	—	—
Normal Pool Elevation	—	N/A

Was long term sediment accumulation taken into consideration in determining the normal pool elevation?  Yes  No

Was the dam designed to withstand the hydrostatic and hydrodynamic forces associated with floods greater than the 100-year flood?  Yes  No

If no, and the dam has a reasonable probability of failure during the 100-year flood, please attach dam break analysis.

Provide the following data on the dam:

Dimensional Height: 15 ft

Crest Elevation of top of dam: 5407.00

100-year flood storage capacity: 39.7 Ac. Ft

Freeboard (measured from 100-year water surface elevation): 3.7'

Spillway(s):

Type:  gated  ungated

Outlet(s):

Type:  gated  ungated

Dimensional Width: 62.6'

Width: 26'

Dimensional Height: 10.75'

Height 14'-8"

Crest Elevation of top of spillway: 5402.74

Diameter: 42 in.

Invert Elevation: 5388.85

Explain flow regulation plan: THE 100 YR FLOW OF 926 cfs IS REDUCED TO 160 cfs BY RETAINING THE FLOW AND RELEASING IT THROUGH A 42" PIPE.

Are the project features, including the emergency spillway, designed to accommodate the 100-year flood discharge without overtopping the dam?  Yes  No

Was the dam designed in accordance with all currently applicable local, State, and Federal regulations?  Yes  No

If no, please provide explanation.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

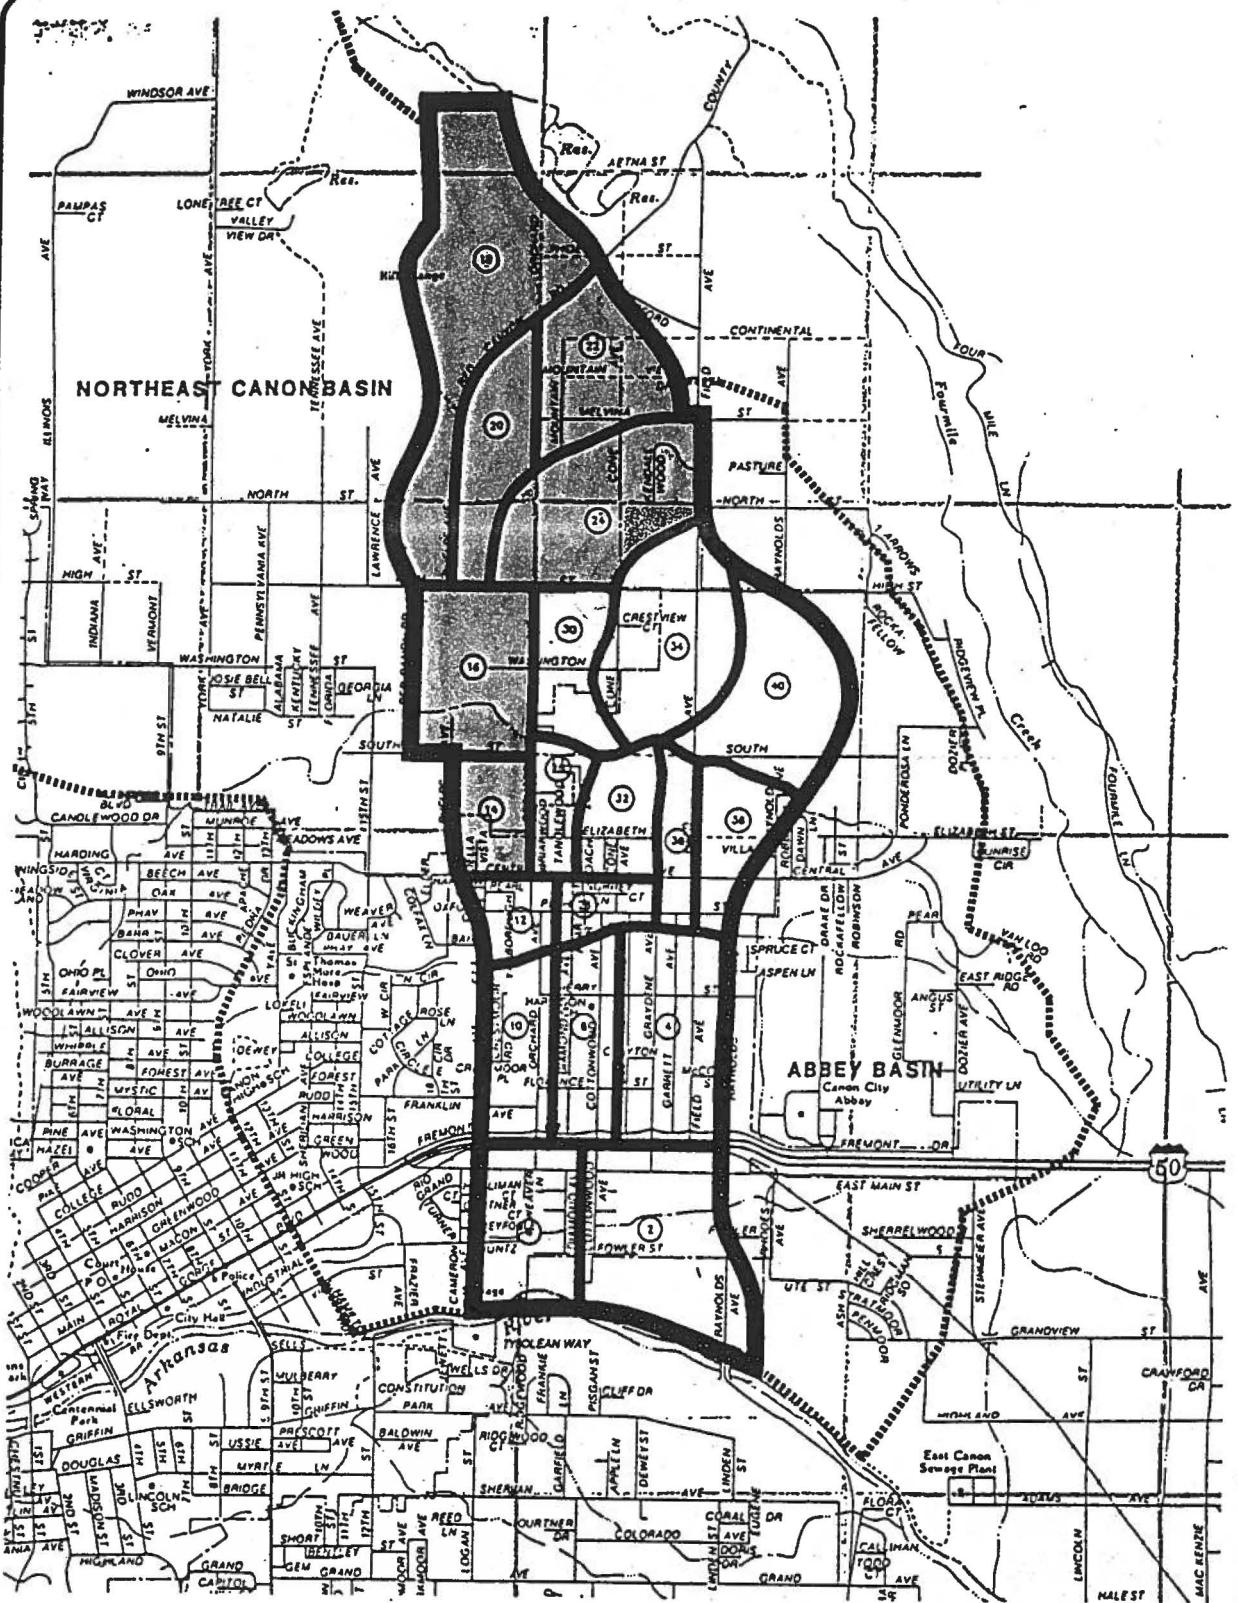

FEMA may request a list of regulations that have been complied with and supporting documentation demonstrating compliance with these regulations.

Attach copy of formal operation and maintenance plan

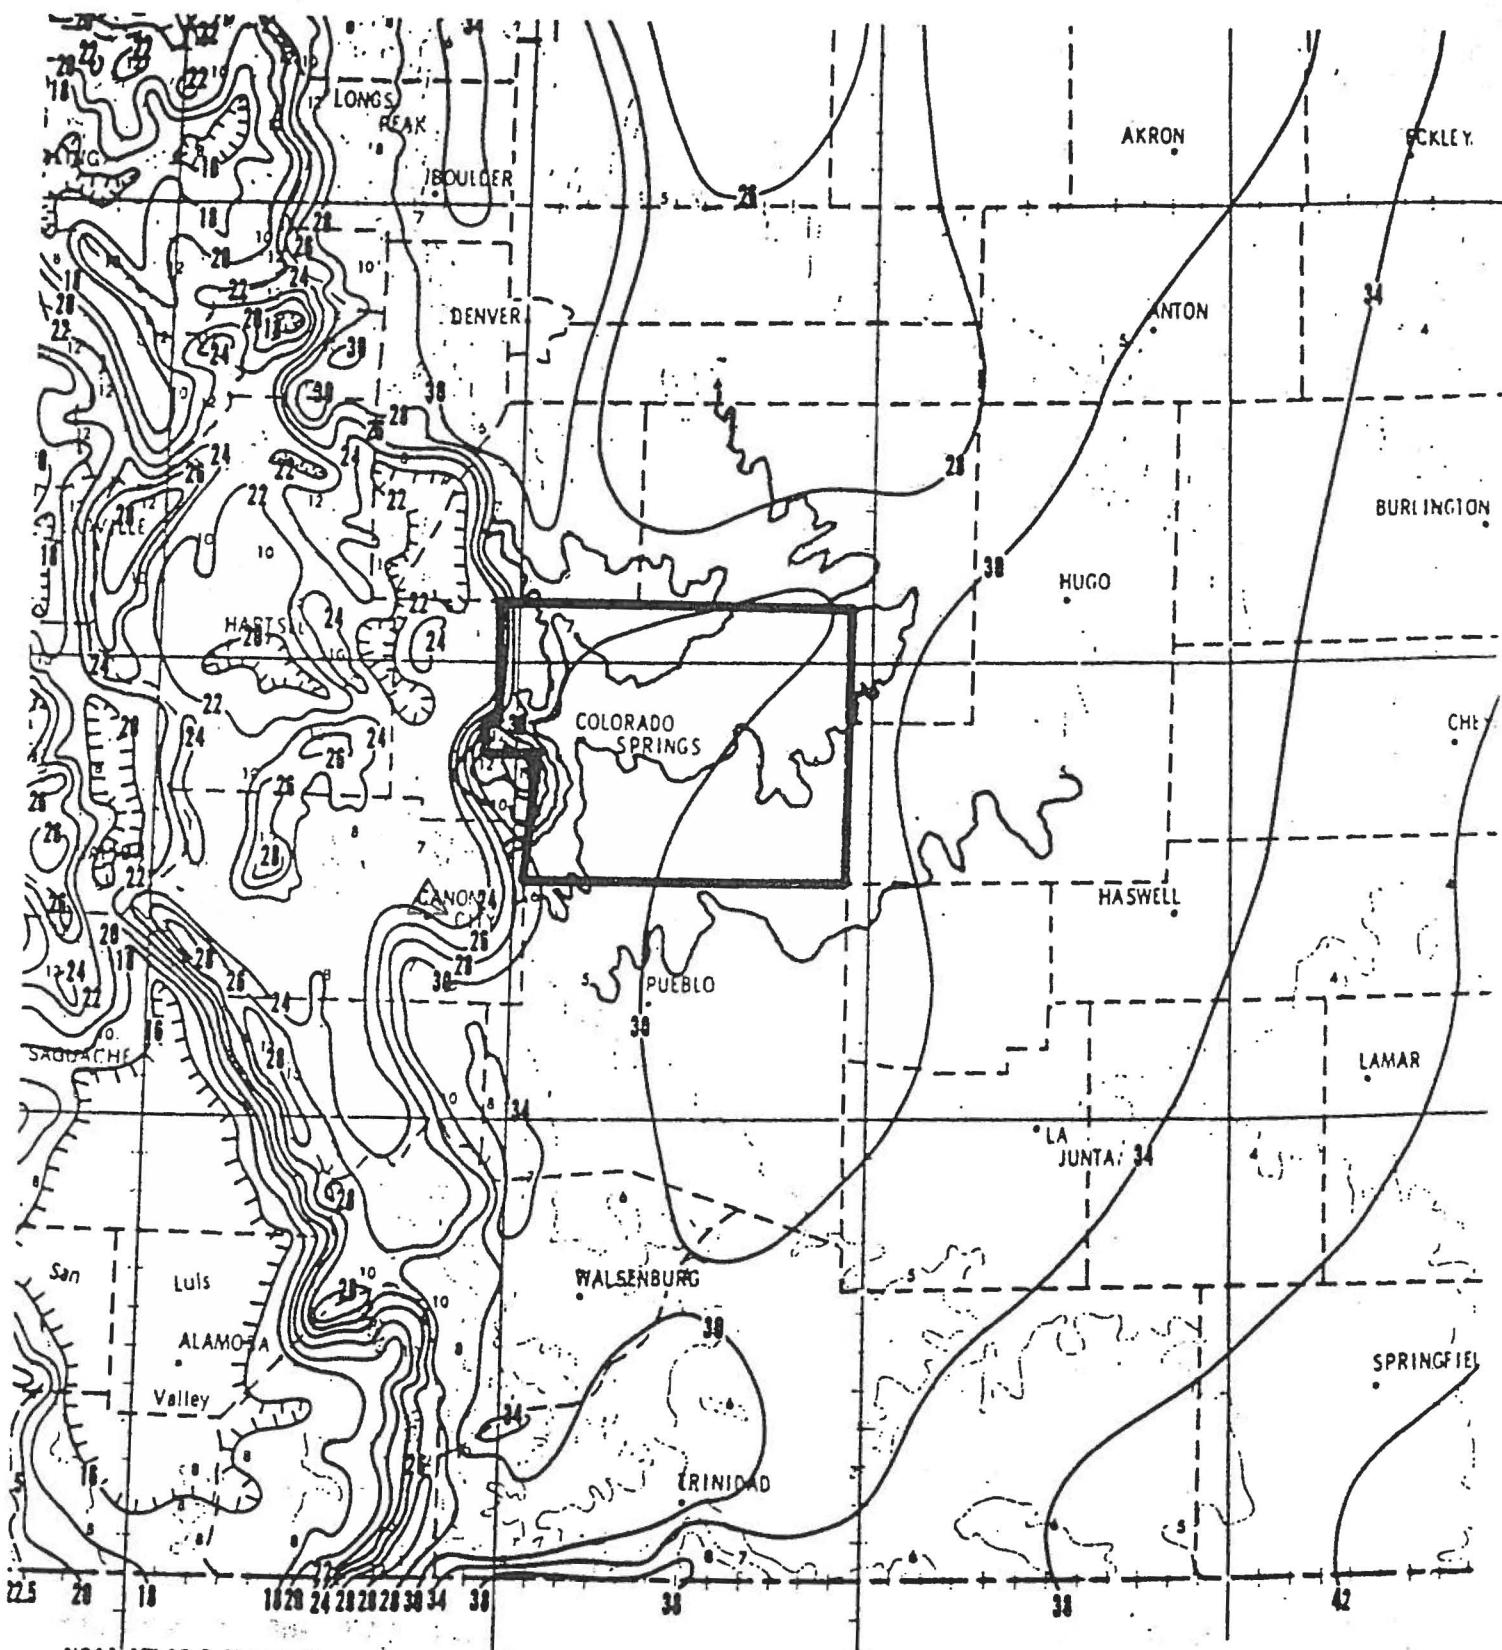

Answer N/A to any questions which are not applicable

Warning - The cross-section end points had to be extended vertically for the computed water surface.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - During subcritical analysis, while trying to calculate culvert and weir flow, the program could not get a balance of energy within the specified tolerance and number of trials. The program used the solution with the minimum error.

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

Note - Culvert critical depth exceeds the height of the culvert.

Note - The flow in the culvert is entirely supercritical.

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The energy loss was greater than 1.0 ft (0.3 m) between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

Warning - Divided flow computed for this cross-section.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

```

arning - The cross-section end points had to be extended vertically for the computed water surface.

arning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

## RORS WARNINGS AND NOTES

Errors Warnings and Notes for Plan : PRE DET.

ver: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 11 Profile: 1

Warning - The cross-section end points had to be extended vertically for the computed water surface.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

ver: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 11 Profile: 2

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

ver: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 11 Profile: 3

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

ver: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9.5 Profile: 1

Warning - During subcritical analysis, while trying to calculate culvert and weir flow, the program could not get a balance of energy within the specified tolerance and number of trials. The program used the solution with the minimum error.

ver: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9.5 Profile: 1 Culv: HIGH STREET

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

Note - Culvert critical depth exceeds the height of the culvert.

Note - The flow in the culvert is entirely supercritical.

ver: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9.5 Profile: 2

Warning - During subcritical analysis, while trying to calculate culvert and weir flow, the program could not get a balance of energy within the specified tolerance and number of trials. The program used the solution with the minimum error.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9.5 Profile: 2 Culv: HIGH STREET

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

Note - Culvert critical depth exceeds the height of the culvert.

Note - The flow in the culvert is entirely supercritical.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9.5 Profile: 3

Warning - During subcritical analysis, while trying to calculate culvert and weir flow, the program could not get a balance of energy within the specified tolerance and number of trials. The program used the solution with the minimum error.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9.5 Profile: 3 Culv: HIGH STREET

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

Note - Culvert critical depth exceeds the height of the culvert.

Note - The flow in the culvert is entirely supercritical.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9 Profile: 1

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9 Profile: 2

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate

the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 9 Profile: 3

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 8 Profile: 1

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 8 Profile: 2

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 8 Profile: 3

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 7 Profile: 1

Warning - Divided flow computed for this cross-section.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 7 Profile: 2

Warning - Divided flow computed for this cross-section.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 7 Profile: 3

Warning - Divided flow computed for this cross-section.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 6 Profile: 1

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 6 Profile: 2

- Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
- Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
- Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 6 Profile: 3

- Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
- Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 5.5 Profile: 3 Culv: SOUTH STREET

- Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 5 Profile: 1

- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 5 Profile: 2

- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 5 Profile: 3

- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 4 Profile: 1

- Warning - Divided flow computed for this cross-section.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
- Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 4 Profile: 2

- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
- Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 4 Profile: 3

- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 3 Profile: 1

- Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 3 Profile: 2

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 3 Profile: 3

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 2 Profile: 1

Warning - The cross-section end points had to be extended vertically for the computed water surface.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 2 Profile: 2

Warning - The cross-section end points had to be extended vertically for the computed water surface.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

River: NE CANON DRAINAG Reach: SUB-BASIN FROM N RS: 2 Profile: 3

Warning - Divided flow computed for this cross-section.

Warning - The cross-section end points had to be extended vertically for the computed water surface.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

```

arning - During subcritical analysis, while trying to calculate culvert and weir flow, the program could not get a balance of energy within the specified tolerance and number of trials. The program used the solution with the minimum error.

Note - Culvert critical depth exceeds the height of the culvert.

Note - During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Note - The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

note - Culvert critical depth exceeds the height of the culvert.

Note - The flow in the culvert is entirely supercritical.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

Note - Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

*****
```

Warning - The energy equation could not be balanced within the specified number of iterations. The program selected the water surface that had the least amount of error between computed and assumed values.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The parabolic search method failed to converge on critical depth. The program will try the

cross section slice/secant method to find critical depth.

Note - Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

ERRORS WARNINGS AND NOTES

Errors Warnings and Notes for Plan : AS BUILT

River: RED CANON DRAW Reach: MAIN STEM RS: 10.5 Profile: 1 Culv: HIGH ST - 6'

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

River: RED CANON DRAW Reach: MAIN STEM RS: 10.5 Profile: 1 Culv: HIGH ST - 5'

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

River: RED CANON DRAW Reach: MAIN STEM RS: 10.5 Profile: 2 Culv: HIGH ST - 6'

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

River: RED CANON DRAW Reach: MAIN STEM RS: 10.5 Profile: 2 Culv: HIGH ST - 5'

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

River: RED CANON DRAW Reach: MAIN STEM RS: 10.5 Profile: 3 Culv: HIGH ST - 6'

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

River: RED CANON DRAW Reach: MAIN STEM RS: 10.5 Profile: 3 Culv: HIGH ST - 5'

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

River: RED CANON DRAW Reach: MAIN STEM RS: 10 Profile: 1

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m) between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: RED CANON DRAW Reach: MAIN STEM RS: 10 Profile: 2

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical

depth for the water surface and continued on with the calculations.

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: RED CANON DRAW Reach: MAIN STEM RS: 10 Profile: 3

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 9 Profile: 1

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: RED CANON DRAW Reach: MAIN STEM RS: 9 Profile: 2

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 9 Profile: 3

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

River: RED CANON DRAW Reach: MAIN STEM RS: 8 Profile: 1

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: RED CANON DRAW Reach: MAIN STEM RS: 8 Profile: 2

Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.

Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.

- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
- Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

River: RED CANON DRAW Reach: MAIN STEM RS: 8 Profile: 3

- Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 7 Profile: 1

- Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
- Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.
- Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

Note - Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

River: RED CANON DRAW Reach: MAIN STEM RS: 7 Profile: 2

- Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
- Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.
- Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.
- Note - Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

River: RED CANON DRAW Reach: MAIN STEM RS: 7 Profile: 3

- Warning - The energy equation could not be balanced within the specified number of iterations. The program used critical depth for the water surface and continued on with the calculations.
- Warning - The velocity head has changed by more than 0.5 ft (0.15 m). This may indicate the need for additional cross sections.
- Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.
- Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.
- Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.
- Note - Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

River: RED CANON DRAW Reach: MAIN STEM RS: 5.5 Profile: 1

- Warning - During subcritical analysis, while trying to calculate culvert and weir flow, the program could not get a balance of energy within the specified tolerance and number of trials. The program used the solution with the minimum error.

River: RED CANON DRAW Reach: MAIN STEM RS: 5.5 Profile: 1 Culv: BASIN CLVRT.

Note - Culvert critical depth exceeds the height of the culvert.

Note - During the supercritical calculations a hydraulic jump occurred inside of the culvert.

Note - The culvert inlet is submerged and the culvert flows full over part or all of its length. Therefore, the culvert inlet equations are not valid and the supercritical result has been discarded. The outlet answer will be used.

River: RED CANON DRAW Reach: MAIN STEM RS: 5.5 Profile: 2 Culv: BASIN CLVRT.

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - Culvert critical depth exceeds the height of the culvert.

Note - The flow in the culvert is entirely supercritical.

River: RED CANON DRAW Reach: MAIN STEM RS: 5.5 Profile: 3 Culv: BASIN CLVRT.

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - The flow in the culvert is entirely supercritical.

River: RED CANON DRAW Reach: MAIN STEM RS: 4.5 Profile: 1 Culv: SOUTH STREET

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - The normal depth exceeds the height of the culvert. The program assumes that the normal depth is equal to the height of the culvert.

Note - The flow in the culvert is entirely supercritical.

River: RED CANON DRAW Reach: MAIN STEM RS: 4.5 Profile: 2 Culv: SOUTH STREET

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - The flow in the culvert is entirely supercritical.

River: RED CANON DRAW Reach: MAIN STEM RS: 4.5 Profile: 3 Culv: SOUTH STREET

Warning - Since the culvert has supercritical flow, the program should be run in mixed flow in order to check if the cross section downstream of the culvert has supercritical flow.

Note - The flow in the culvert is entirely supercritical.

River: RED CANON DRAW Reach: MAIN STEM RS: 4 Profile: 1

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 4 Profile: 2

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 4 Profile: 3

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 3 Profile: 1

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

Note - Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

River: RED CANON DRAW Reach: MAIN STEM RS: 3 Profile: 2

Warning - The energy equation could not be balanced within the specified number of iterations. The program selected the water surface that had the least amount of error between computed and assumed values.

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

Warning - During the standard step iterations, when the assumed water surface was set equal to critical depth, the calculated

water surface came back below critical depth. This indicates that there is not a valid subcritical answer. The program defaulted to critical depth.

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.

Note - Multiple critical depths were found at this location. The critical depth with the lowest, valid, water surface was used.

River: RED CANON DRAW Reach: MAIN STEM RS: 3 Profile: 3

Warning - The conveyance ratio (upstream conveyance divided by downstream conveyance) is less than 0.7 or greater than 1.4. This may indicate the need for additional cross sections.

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 2 Profile: 1

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 2 Profile: 2

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 2 Profile: 3

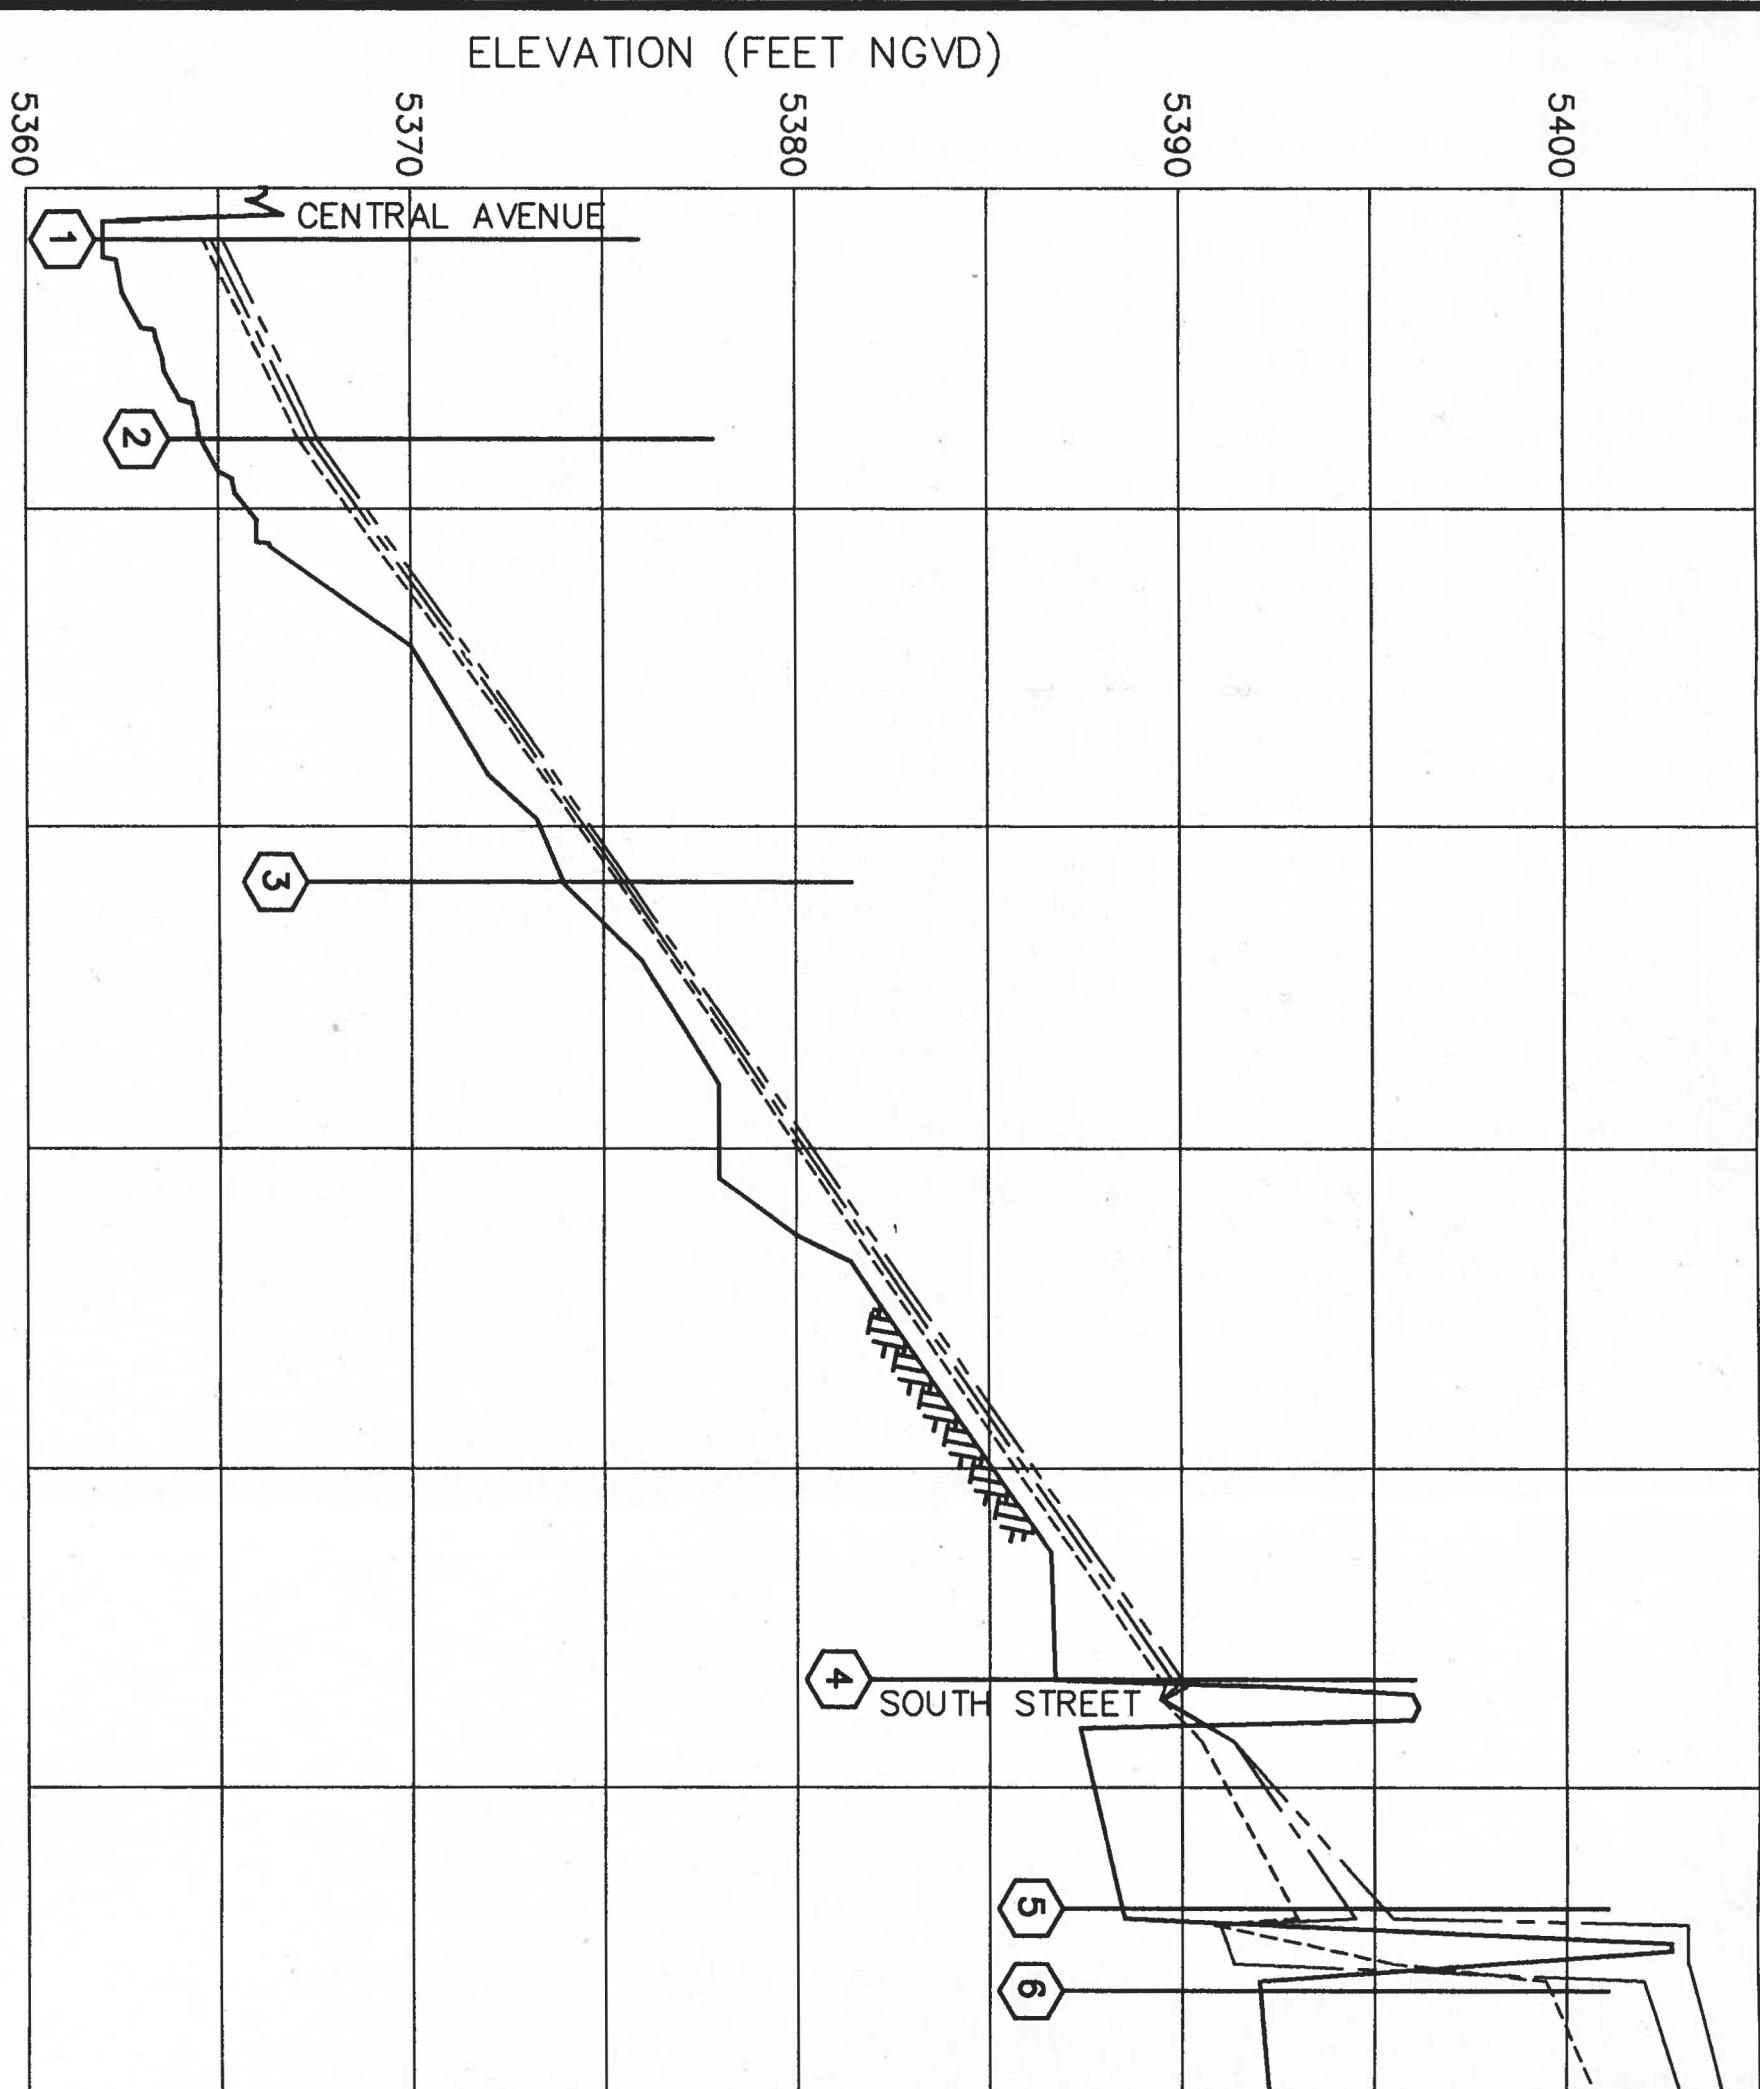

Warning - The energy loss was greater than 1.0 ft (0.3 m). between the current and previous cross section. This may indicate the need for additional cross sections.

River: RED CANON DRAW Reach: MAIN STEM RS: 1 Profile: 1

Warning - The parabolic search method failed to converge on critical depth. The program will try the cross section slice/secant method to find critical depth.
